

ANNUAL INFORMATION FORM
Financial Year Ended November 30, 2014

February 25, 2015

BASIS OF PRESENTATION

In this Annual Information Form, or AIF:

- references to “Theratechnologies”, the “Company”, the “Corporation”, “we”, “our” and “us” or similar terms refer to Theratechnologies Inc. and its subsidiaries on a consolidated basis, unless otherwise indicated or unless the context requires otherwise;
- *EGRIFTA*[™] (tesamorelin for injection), or *EGRIFTA*[™] or *EGRIFTA*[®], refers to tesamorelin for the reduction of excess abdominal fat in HIV-infected patients with lipodystrophy, regardless of the trade name that could be used for such product in any particular territory. *EGRIFTA* is our registered trademark in the United States and it is used in that country to commercialize tesamorelin for the reduction of excess abdominal fat in HIV-infected patients with lipodystrophy. Other trademarks and service marks appearing in this AIF are the property of their respective holders.
- Tesamorelin refers to the use of our tesamorelin compound for the potential treatment of other diseases;
- all monetary amounts set forth are expressed in Canadian dollars, except where otherwise indicated. References to “\$” and “C\$” are to Canadian dollars and references to “US\$” are to U.S. dollars;
- all information is provided as of February 25, 2015, except where otherwise stated.

FORWARD-LOOKING STATEMENTS

This AIF contains forward-looking statements and forward-looking information within the meaning of applicable securities laws that are based on our management’s belief and assumptions and on information currently available to our management, collectively, “forward-looking statements”. In some cases, you can identify forward-looking statements by terms such as “may”, “will”, “should”, “could”, “would”, “expect”, “plan”, “anticipate”, “believe”, “estimate”, “project”, “predict”, “intend”, “potential”, “continue” and similar expressions intended to identify forward-looking statements. Although we believe that the expectations reflected in these forward-looking statements are reasonable, these statements relate to future events or our future performance, and involve known and unknown risks, uncertainties and other factors that may cause our actual results, levels of activity, performance or achievements to be materially different from any future results, levels of activity, performance or achievements expressed or implied by these forward-looking statements. Forward-looking statements include, but are not limited to, statements about:

- our expectations regarding the commercialization of *EGRIFTA*[™];
- our expectations regarding the integrity of our supply chain for *EGRIFTA*[™];
- our ability and capacity to continue the manufacture of *EGRIFTA*[™];
- our ability and capacity to improve our manufacturing process for *EGRIFTA*[™];
- our ability and capacity to grow the sales of *EGRIFTA*[™] successfully in the United States;
- our ability and capacity to commercialize *EGRIFTA*[™] in Canada;
- our ability and capacity to conduct the post-approval commitments mandated by the United States Food and Drug Administration;
- the ability of our commercial partner, sanofi, to obtain the right to commercialize *EGRIFTA*[™] in other territories;

- whether we will be able to find new commercial partners in Europe;
- whether we will receive regulatory approvals for *EGRIFTA*[™] from regulatory agencies in territories other than the United States in which we wish to undertake the commercialization of *EGRIFTA*[™], and the timing of obtaining such regulatory approvals;
- the continuation of our collaborations and other significant agreements with our existing commercial partner and third-party suppliers and our ability to establish and maintain additional collaboration agreements;
- our success in obtaining, and the timing and amount of, reimbursement by third-party payors for *EGRIFTA*[™] in the United States and in other territories;
- the success and pricing of other competing drugs or therapies that are or may become available;
- our ability to establish and maintain intellectual property rights in *EGRIFTA*[™], Tesamorelin and our other product candidates;
- our expectations regarding our financial performance, including revenues, expenses, gross margins, profitability, liquidity, capital expenditures and income taxes; and
- our need for additional financing and our estimates regarding our capital requirements.

Such statements reflect our current views with respect to future events and are subject to certain risks, uncertainties and assumptions which may cause our actual results, performance or achievements to be materially different from any future results, performance or achievements expressed in or implied by the forward-looking statements. Certain assumptions made in preparing the forward-looking statements include that:

- continuous supply of *EGRIFTA*[™] will be available;
- our commercial practices in the United States will not be found to be in violation of applicable laws;
- Health Canada will approve our supplemental new drug submission for the 1 mg/vial presentation;
- we will be able to find new commercial partners in Europe resulting in the refiling of a marketing authorization application for *EGRIFTA*[™] in certain European countries or the dispensing of *EGRIFTA*[™] through named patient programs;
- *EGRIFTA*[™] will receive approval in territories (other than the United States) where marketing authorization applications have been filed;
- no additional clinical studies will be required to obtain regulatory approvals for *EGRIFTA*[™] in territories (other than the United States) where marketing authorization applications have been filed;
- the long-term use of *EGRIFTA*[™] will not change the current safety profile of *EGRIFTA*[™];
- sales of *EGRIFTA*[™] in the United States will increase over time;
- no recall or market withdrawal of *EGRIFTA*[™] will occur;
- no laws, regulation, order, decree or judgment will be passed or issued by a governmental body having the effect of preventing the marketing, promotion or sale of *EGRIFTA*[™] in the United States;

- our relations with third-party suppliers of *EGRIFTA*[™] will be conflict-free and such third-party suppliers will have the capacity to manufacture and supply *EGRIFTA*[™] to meet market demand and on a timely-basis;
- our intellectual property will prevent any generic company to commercialize a generic form of *EGRIFTA*[™] in the United States; and
- our business plan will not be substantially modified.

Forward-looking statements reflect our current views with respect to future events and are based on assumptions and subject to risks and uncertainties. Given these risks and uncertainties, the forward-looking statements and circumstances discussed in this AIF may not occur, and you should not place undue reliance on these forward-looking statements. We discuss many of our risks in greater detail under “Item 3 - Risk Factors” (below) but additional risks and uncertainties, including those that we do not know about or that we currently believe are immaterial, may also adversely affect the forward-looking statements, our business, financial condition and prospects. Also, these forward-looking statements represent our estimates and assumptions only as of the date of this AIF. We undertake no obligation and do not intend to update or revise these forward-looking statements, unless required by law. We qualify all of the information presented in this AIF, and particularly our forward-looking statements, with these cautionary statements.

SELECTED EVENTS IN FISCAL YEAR 2014

The following summary highlights selected events contained elsewhere in this AIF. This summary does not contain all of the information about us and you should carefully read the entire AIF, including the section entitled "Risk Factors".

Commercial Events

- we regained all of the commercialization rights to *EGRIFTA*TM in the United States effective May 1, 2014;
- we resumed the distribution of *EGRIFTA*TM in the United States in September 2014;
- we regained all of the commercialization rights to *EGRIFTA*TM in Canada on April 30, 2014.

Regulatory Events

- we obtained regulatory approval from Health Canada in April 2014 to commercialize *EGRIFTA*TM in its 2 mg/vial presentation;
- we filed a supplementary new drug submission, or SNDS, with Health Canada in August 2014 to commercialize *EGRIFTA*TM in Canada in its 1 mg/vial presentation.

Research & Development Event

- we regained the management of the long-term observational safety study and of the Phase 4 clinical trial mandated by the United States Food and Drug Administration.

Corporate Event

- we restructured the amount and payment terms of our initial US \$4,000,000 payment due May 1, 2015 as part of our long-term obligation;
- we obtained a patent term extension of five (5) years from the Patent and Trademark Office of the United States, or USPTO, on U.S. patent 5,861,379 pertaining to our main compound, tesamorelin.

ITEM 1 CORPORATE STRUCTURE

1.1 NAME, ADDRESS AND INCORPORATION

We were incorporated under Part IA of the *Companies Act* (Québec), or CAQ, on October 19, 1993 under the name Theratechnologies Inc. We amended our articles on October 20, 1993 by repealing the restrictions applicable to private companies. On December 6, 1993, we again amended our articles to increase the number of directors and to modify our share capital. On March 26, 1997, we further modified our share capital to consist of an unlimited number of common shares and an unlimited number of preferred shares. Finally, on June 21, 2011, we amended our articles to give the power to our directors to appoint a number of additional directors equal to 33.33% of the number of directors elected at the last shareholders meeting preceding any appointment.

On February 14, 2011, the CAQ was abrogated and replaced by the *Business Corporations Act* (Québec), or BCA, and companies governed by Part IA of the CAQ such as us became business corporations governed by the BCA. Accordingly, we did not have to file articles of continuation or amend our existing corporate articles. The BCA was applicable immediately without having to complete any formalities.

Our common shares are listed on the Toronto Stock Exchange, or TSX, under the symbol "TH. See Item 6.1 for a complete description of our authorized share capital.

Our head office and principal place of business are located at 2015 Peel Street, 5th Floor, Montreal, Québec, Canada H3A 1T8. Our phone number is (514) 336-7800. Our website is www.theratech.com. The information contained on our website is not part of this AIF.

1.2 SUBSIDIARIES

As of February 25, 2015, Theratechnologies had the following four wholly-owned subsidiaries:

- **Theratechnologies Intercontinental Inc.**, a company governed by the *Business Corporations Act* (Québec). Theratechnologies Intercontinental Inc., formerly Theratechnologies ME Inc., controls the worldwide rights to commercialize *EGRIFTA*TM, except in the United States, Europe, Russia, South Korea, Taiwan, Thailand and certain central Asian countries, and Canada;
- **Theratechnologies Europe Inc.**, a company governed by the *Business Corporations Act* (Québec). Theratechnologies Europe Inc., formerly 9176-5057 Québec Inc., controls the rights to commercialize *EGRIFTA*TM in Europe, Russia, South Korea, Taiwan, Thailand and certain central Asian countries;
- **Theratechnologies Canada Inc.**, a company governed by the *Business Corporations Act* (Québec). Theratechnologies Canada Inc. controls the rights to commercialize *EGRIFTA*TM in Canada; and
- **Pharma-G Inc.**, a company governed by the *Business Corporations Act* (Québec). Pharma-G Inc. is no longer an active subsidiary.

ITEM 2 OUR BUSINESS

2.1 OVERVIEW

We are a specialty pharmaceutical company addressing unmet medical needs in metabolic disorders to promote healthy ageing and an improved quality of life.

Our first product, *EGRIFTA*[™] (tesamorelin for injection), was approved by the FDA in November 2010 and was launched in the United States in January 2011. *EGRIFTA*[™] is currently the only approved therapy for the reduction of excess abdominal fat in HIV-infected patients with lipodystrophy.

Since May 1, 2014, *EGRIFTA*[™] is marketed exclusively in the United States by us further to regaining all of the commercialization rights to *EGRIFTA*[™] in the United States from EMD Serono, Inc., or EMD Serono, pursuant to a transfer and termination agreement entered into by and between us and EMD Serono dated December 13, 2013, or the EMD Serono Termination Agreement. Before May 1, 2014, EMD Serono was solely responsible for the commercialization of *EGRIFTA*[™] in the United States under a collaboration and licensing agreement entered into by and between us and EMD Serono dated October 28, 2008, as amended, or the EMD Serono Agreement. We have also entered into a distribution and licensing agreement with sanofi dated December 6th, 2010, or the Sanofi Agreement, granting sanofi the exclusive commercialization rights to *EGRIFTA*[™] in Latin America, Africa and the Middle East. We terminated our distribution and licensing agreement with Ferrer Internacional, S.A., or Ferrer, in April 2013 and have regained all of our commercialization rights to *EGRIFTA*[™] in Europe. We terminated our supply, distribution and licensing agreement with Actelion Pharmaceuticals Canada Inc., or Actelion, in April 2014 and have regained all of our commercialization rights to *EGRIFTA*[™] in Canada. Health Canada approved the commercialization of *EGRIFTA*[™] in Canada in April 2014 by issuing a notice of compliance, or NOC, for *EGRIFTA*[™] in its 2 mg/vial presentation. In order to reflect the current commercial presentation of *EGRIFTA*[™], we have filed a supplementary new drug submission, or SNDS, with Health Canada seeking the authorization to commercialize *EGRIFTA*[™] in Canada in a 1 mg/vial presentation. We have also filed applications with Health Canada for the obtaining of certain permits and licenses necessary to commercialize *EGRIFTA*[™] in Canada.

EGRIFTA[®] is our registered trademark in the United States and it is used in that country for the commercialization of our first product using our internally developed compound, tesamorelin. Tesamorelin is a growth hormone-releasing factor, or GRF, analogue that stimulates the synthesis and pulsatile release of endogenous growth hormone.

We have worked on the development of new GRF peptides and, in October 2011, we identified TH1173 as our second generation GRF peptide. The preclinical safety program was completed and the results obtained could allow for the pursuit of the Phase 1 clinical program. We have also developed a compound that is aimed at preventing or treating the acute deterioration of kidney function, also known as acute kidney injury, or AKI. Finally, we have identified small peptides from the melanotransferrin protein which could replicate the functions of the full length protein. These peptides could be used as a new cancer treatment. The AKI compound and the melanotransferrin peptides are at an early preclinical stage. On October 30, 2012, we announced that our research and development activities were suspended.

2.2 RECENT DEVELOPMENTS

Since the end of our most recently completed financial year, the following events have occurred:

- *Restructuring of Long-Term Obligation.* We restructured the amount and the payment terms of our initial US \$4,000,000 payment due May 1, 2015 as part of our long-term obligation. The amount of the first payment now aggregates US \$4,167,808 and is payable in three tranches of US \$500,000, US \$1,550,548 and US \$2,117,260 on May 1, 2015, August 31, 2015 and November 30, 2015, respectively. The balance of the amount and the other payment terms of the long-term obligation remain unchanged.
- *Suspension of SEC Reporting Requirements.* On February 3, 2015, we announced that we filed a Form 15 with the Securities and Exchange Commission of the United States, or SEC, to suspend our reporting obligations in the United States.
- *Class Action Update.* On December 1, 2014, the Supreme Court of Canada heard the arguments from counsel to 121851 Canada Inc. and from our counsel on the motion to institute a class action against the Corporation, a director and a former executive officer. No decision has been rendered by the Supreme Court of Canada yet.

2.3 THREE YEAR HISTORY

2014

- *Resumption of Distribution of EGRIFTA™ in the United States.* On September 3, 2014, we announced that a first shipment of EGRIFTA™ had been sent to our exclusive distributor in the United States, RxC Acquisition Company, or RxCrossroads, to replenish our supply chain.
- *Receipt of \$4.1 million from Revenue Canada.* On June 25, 2014, we announced that we received a refund payment of approximately \$4.1 million from the Canada Revenue Agency after settling a dispute over our claims of refundable investment tax credits related to our 1994 and 1995 taxation years.
- *Patent Term Extension Granted on Tesamorelin.* On June 9, 2014, the USPTO issued a patent term extension certificate for our compound tesamorelin. As a result, the term of U.S. patent 5,861,379 was extended by five (5) years and is now set to expire in May 2020.
- *Regaining of Commercialization Rights to EGRIFTA™ in the United States.* On May 1, 2014, we regained all rights to EGRIFTA™ in the United States from EMD Serono following the closing on that day of the transaction contemplated by the EMD Serono Termination Agreement.
- *EGRIFTA™ Approved for Commercialization in Canada.* On April 30, 2014, we announced that Health Canada issued a NOC for EGRIFTA™ paving the way for the commercialization of EGRIFTA™ in Canada. We also announced that we would be filing a SNDS with Health Canada to obtain approval from this regulatory agency to commercialize EGRIFTA™ in its 1 mg/vial presentation. To date, we have not received a decision from Health Canada on our SNDS.
- *EGRIFTA™ Shortage.* On February 14, 2014, we announced that we expected our inventory of EGRIFTA™ to be depleted in a matter of weeks due to a combination of manufacturing delays and issues observed during the production of new batches of EGRIFTA™. We further advised that the ensuing depletion of the inventory would result in a shortage of EGRIFTA™ and an eventual stock-out and that we were temporarily ceasing to manufacture EGRIFTA™.

- *Termination of EMD Serono Agreement.* On December 13, 2013, we entered into the EMD Serono Termination Agreement pursuant to which we regained all commercialization rights to *EGRIFTA*[™] in the United States on May 1, 2014.
- *Shipment of EGRIFTA*[™] *to EMD Serono Resumed.* On December 3, 2013, we resumed shipment of *EGRIFTA*[™] to EMD Serono following the manufacturing difficulties we had encountered and reported by us on April 11, 2013

2013

- *Labour Disruption at Third-Party Manufacturing Supplier.* On November 13, 2013, we announced that we had been informed of a labour disruption by Jubilant HollisterStier General Partnership, or Jubilant, our third-party contract manufacturer of *EGRIFTA*[™]. Planned shipments of *EGRIFTA*[™] were not affected by the labour disruption, which has since been resolved.
- *FDA Notified of EGRIFTA*[™] *Shortage.* On September 18, 2013, we announced that EMD Serono had voluntarily notified the FDA about an upcoming shortage of *EGRIFTA*[™] related to the manufacturing difficulties that had been first reported by us on April 11, 2013. EMD Serono implemented a mitigation plan to reduce the duration of the shortage to a minimum.
- *Class Action Motion Authorized.* On July 17, 2013, we announced that the Court of appeal of Québec dismissed our motion to dismiss the previously granted authorization to institute a class action and an action based on the secondary market liability provisions of the *Securities Act* (Québec) against the Company, a director and a former executive officer. We filed an application seeking leave to appeal this decision with the Supreme Court of Canada in November 2013. The application was approved by the Supreme Court of Canada on February 20, 2014.
- *New US Patent Granted for Improving Cognitive Function.* On July 11, 2013, we obtained patent number 8,481,489 from the USPTO entitled “GH Secretagogues and Uses Therof” covering a method of improving cognitive function in a subject suffering from mild cognitive impairment through the administration of tesamorelin. The patent will expire in 2024.
- *Colombian Regulatory Authorities Recommend Against Approving Tesamorelin.* On June 28, 2013, we announced that our commercial partner, sanofi, had received notification that the Colombian regulatory authorities had recommended against approval of tesamorelin, stating that additional long-term safety and efficacy studies are needed.
- *Second Motion to Authorize a Class Action Filed.* On May 27, 2013, we announced that 121851 Canada Inc. (the same petitioner who filed a motion in July 2010) had filed a second motion of authorization to institute a class action against the Company, a director and a former executive officer. The second motion is based on the same facts and seeks the same conclusion as the first motion, except that damages are sought under the *Civil Code of Québec* instead of the *Securities Act* (Québec). The parties have agreed to stay this motion for the time being.
- *Manufacturing Issues with EGRIFTA*[™]. On April 11, 2013, in conjunction with the announcement of our first quarter financial results, we reported that our third-party manufacturing supplier of *EGRIFTA*[™] had experienced difficulties during the conversion of raw materials to finished goods in January 2013. The manufacture of *EGRIFTA*[™] was suspended until corrective measures could be implemented. On September 4, 2013, we announced that we would resume production of *EGRIFTA*[™] using our original manufacturing

process after having encountered quality issues with the corrective measures we had developed. We undertook to the Food and Drug Administration of the United States, or FDA, to evaluate changes that could increase overall cycle robustness.

- *New Director Appointed and Named Chair of the Board of Directors.* On April 9, 2013, we announced the appointment of Dawn Svoronos (formerly Graham) to our Board of Directors. Ms. Svoronos was previously president of the Europe/Canada region for Merck & Co., a multinational pharmaceutical corporation. Ms. Svoronos was subsequently elected Chair of the Board of Directors at a meeting held on May 24, 2013.
- *Agreement with Ferrer Terminated.* On April 8, 2013, we announced the termination of our distribution and licensing agreement with Ferrer. As a result, we regained 100% of the commercialization rights for *EGRIFTA*[™] in Europe, Russia, South Korea, Taiwan, Thailand and in certain central Asian countries.
- *Amended Lease Agreement.* On April 3, 2013, we announced that we entered into an amendment to our lease agreement with our landlord for our corporate headquarters, which resulted in an 85% annual reduction in lease-related cash outlays and shortened the remaining term of the lease from eight (8) years to five (5) years.
- *Health Canada Decision on Tesamorelin.* On March 4, 2013, we announced that Health Canada had issued a Notice of Non-compliance-Withdrawal, or NON/w, for our new drug submission, or NDS, for tesamorelin proposed for the treatment of excess abdominal fat in HIV-infected patients with lipodystrophy. After analysis of the NDS, Health Canada concluded that the risks of tesamorelin outweighed its benefits under the proposed conditions of use. On March 25, 2013, we announced that we had filed with Health Canada a request for reconsideration following the issuance of the NON/w and on November 1, 2013, we announced that Health Canada agreed to resume the review of our NDS for *EGRIFTA*[™] after agreeing to rescind the NON/w.
- *Delisting of Our Common Shares on NASDAQ.* On February 5, 2013, our common shares were delisted from the NASDAQ Global Market, or NASDAQ, further to our decision to voluntarily delist such common shares from this market. Our decision was announced on January 14, 2013 after our Board of Directors reviewed the followings: the NASDAQ letter received on August 7, 2012 regarding the closing bid price of our common shares, the applicable NASDAQ rules and regulations, the benefits generated by the maintenance of the listing, our then current share price, the obligation to proceed with a reverse stock-split to maintain the listing, the effect on our share price and shareholdings to proceed with a reverse stock split and the fact that our common shares would continue trading on the Toronto Stock Exchange under the symbol "TH".
- *Grant of US Patent for TH1173.* On January 29, 2013, we obtained patent number 8,361,964 from the USPTO for TH1173. We also confirmed that results obtained from our preclinical safety program on TH1173 warranted the pursuit of the Phase 1 clinical development program at the appropriate time.
- *FDA Approval of Alternative Storage Conditions for EGRIFTA*[™]. On January 21, 2013, we announced that the FDA had granted approval of a supplemental NDS filed by EMD Serono providing for the revision of the *EGRIFTA*[™] prescribing information to include storage conditions for the 2 mg vial up to 12 weeks after dispensing to the patients at or below 25° C.

2012

- *Revised Business Plan.* On October 30, 2012, we announced a restructuring aimed at becoming cash neutral as soon as possible by maximizing revenues from tesamorelin while tightly managing our expenses. The plan also called for completing the ongoing preclinical studies for TH1173 by the end of the calendar year 2012 and suspending all long-term research and development activities. As a result of the revised business plan, we laid off approximately 15 employees.
- *Departure of President and Chief Executive Officer.* On October 11, 2012, we announced the departure of Mr. John-Michel T. Huss as president and chief executive officer of the Corporation and we announced that Mr. Luc Tanguay, our then Senior Vice President and Chief Financial Officer, would be acting as president and chief executive officer. Mr Tanguay was formally appointed as president and chief executive officer of the Corporation in May 2013.
- *Regulatory Update on Filings for EGRIFTA™.* On October 10, 2012, we announced that we had responded to questions raised by Health Canada in its NON and that our NDS was still under review, that the third-party manufacturer of EGRIFTA™ had agreed to address all of the issues raised by ANVISA further to its audit, that the filing made by sanofi in Venezuela was deemed incomplete and that we were still assessing various options to resubmit an marketing authorization application, or MAA, in Europe.
- *NASDAQ Deficiency Letter.* On August 7, 2012, we announced that we received a letter from NASDAQ notifying us that, for the last 30 consecutive business days, the bid price of our common shares had closed below US\$1.00. NASDAQ granted us 180 calendars days, or until February 4, 2013, to comply with its minimum bid price requirement rule.
- *Withdrawal of MAA in Europe.* On June 22, 2012, we announced that our commercial partner, Ferrer, withdrew the MAA from the European Medicines Agency, or EMA, following a hearing with the Committee for Medicinal Products for Human Use, or CHMP. We also announced that we had received from Health Canada a NON regarding our NDS. In addition, we announced that ANVISA had audited our third-party manufacturer of EGRIFTA™ in Montreal, Canada, and identified deficiencies.
- *Application for Registration of EGRIFTA™ in Columbia and Venezuela.* On June 4, 2012, we announced that our commercial partner, sanofi, filed marketing authorization applications for EGRIFTA™ in Columbia and Venezuela.
- *Initiation of Preclinical Safety Program for TH1173.* On May 10, 2012, we announced that we were beginning preclinical safety program for TH1173.
- *Certification of Class Action.* On February 24, 2012, we announced that the Superior Court of Québec, District of Montreal, issued a judgment authorizing the institution of a class action and an action based on the secondary market liability provisions of the *Securities Act* (Québec) against us, a director and a former executive officer on behalf of persons who were shareholders of the Corporation at May 21, 2010 and who sold their common shares on May 25 or 26, 2010. On March 20, 2012, we filed a motion to the Court of Appeal of Québec, District of Montreal, to appeal this judgment.
- *Execution of Supply, Distribution and Licensing Agreement for the Canadian Market.* On February 21, 2012, we announced the execution, through Theratechnologies Canada Inc., of a

supply, distribution and licensing agreement with Actelion, or Actelion Agreement, granting it the exclusive commercialization rights to *EGRIFTA*TM in Canada.

- *Discontinuation of COPD Clinical Program.* On December 7, 2011, we announced that we were discontinuing our muscle wasting associated with chronic obstructive pulmonary disease, or COPD, clinical program, that we were focusing our efforts on supporting our commercial partners with pending marketing authorization applications in various countries and accelerating the development of a second generation GRF. This announcement resulted in the lay off of approximately 40 employees.

2.4 OUR STRATEGY AND OBJECTIVES

Our strategy for value creation in 2015 lies in the U.S. market. After regaining the U.S. commercialization rights to *EGRIFTA*TM on May 1, 2014, we have moved forward with a specialty pharmaceutical business model that is solely focused on our own product. All U.S. activities are aimed directly at elevating the importance of reducing excess abdominal fat in HIV-infected patients with lipodystrophy, an indication unique to *EGRIFTA*TM, for patients, health care providers and third-party payors.

The primary focus of our 2015 business plan is the successful commercialization of *EGRIFTA*TM in the United States and to thereby build a profitable base of operations for the Company. Other objectives include launching *EGRIFTA*TM in the Canadian market and securing a commercial partner to distribute *EGRIFTA*TM in Europe. We also expect to receive a regulatory decision concerning the approval of *EGRIFTA*TM in Mexico.

2.5 OUR PRODUCT AND COMPOUNDS

***EGRIFTA*TM (tesamorelin for injection)- Our Product**

*EGRIFTA*TM (tesamorelin for injection) induces the release of growth hormone which causes a reduction in excess abdominal fat (lipohypertrophy) in HIV-infected patients without reducing or interfering with subcutaneous fat, and, as such, has no clinically significant effect on undesired loss of subcutaneous fat (lipoatrophy).

*EGRIFTA*TM is currently available in the United States as a once-daily two unit dose (two vials, each containing 1 mg of tesamorelin) of sterilized lyophilized powder to be reconstituted with sterile water for injection. To administer *EGRIFTA*TM, 1 ml is retrieved from each vial into one syringe to prepare a single 2 ml patient self-administered subcutaneous injection. *EGRIFTA*TM is injected under the skin into the abdomen once a day. Before the manufacturing issues we encountered in 2013, *EGRIFTA*TM was available as a once-daily one unit dose (one vial containing 2 mg of tesamorelin) of sterilized lyophilized powder to be reconstituted with sterile water for injection.

For the purposes of FDA approval, *EGRIFTA*TM was evaluated in two clinical trials involving a total of 816 HIV-infected adult men and women with lipodystrophy and excess abdominal fat. In both studies, patients treated daily with *EGRIFTA*TM experienced greater reductions in abdominal fat as measured by CT scan and greater improvements in belly appearance distress, compared with patients receiving another injectable solution (placebo). Once the treatment was terminated, the patients' condition reversed to its status prior to the beginning of the treatment. The most commonly reported adverse effects in the studies included reactions due to the release of endogenous hormone, such as joint pain (arthralgia), pain in the extremities, swelling in the lower limbs and muscle pain (myalgia), injection site reactions such as skin redness (erythema), itching (pruritis) and pain and clinically manageable changes in blood sugar control. Our clinical trials did not seek to measure any potential cardiovascular benefits of *EGRIFTA*TM on cardiovascular events. Since the launch of *EGRIFTA*TM in the United

States, our review of the pharmacovigilance data did not reveal any new safety concerns. These data are consistent with the known safety profile of *EGRIFTA*TM.

In connection with its approval, the FDA required the following three post-approval commitments:

- *to develop a single vial presentation of the existing formulation of EGRIFTA*TM. The FDA required that this new presentation be available by November 2013 and EMD Serono launched it in October 2012. As a result of the manufacturing issues we encountered in 2013 with the 2 mg/vial presentation of *EGRIFTA*TM, we reverted back to the use of the original 1 mg/vial presentation. However, we remain committed to reverting to a 2 mg/vial presentation of *EGRIFTA*TM and have made a proposal in this regard to the FDA. As of the date of this AIF, we are waiting for feedback from the FDA on our proposal.
- *to conduct a long-term observational safety study using EGRIFTA*TM. The purpose of the long-term observational study, or Observational Study, required by the FDA is to evaluate the safety of long-term administration of *EGRIFTA*TM. The FDA required that the proposed protocol for the Observational Study be filed by the second quarter of 2011 and the FDA subsequently approved the protocol for the Observational Study. We are currently recruiting patients for the Observational Study. Since May 1, 2014, we are responsible for the conduct of the Observational Study and all of the associated costs.
- *to conduct a Phase 4 clinical trial using EGRIFTA*TM. The primary purpose of the Phase 4 clinical trial, or Retinopathy Study, is to assess whether *EGRIFTA*TM increases the incidence or progression of diabetic retinopathy in diabetic HIV-infected patients with lipodystrophy and excess abdominal fat. The FDA required that the proposed protocols for the Retinopathy Trial be submitted by the second quarter of 2011 and the FDA has now approved the protocol for the Retinopathy Trial. We are currently recruiting patients for the Retinopathy Trial. Since May 1, 2014, we are responsible for the conduct of the Retinopathy Trial and all of the associated costs.

Lipodystrophy

Lipodystrophy is characterized by abnormalities in the production and storage of fat. It has two components: lipohypertrophy, abnormal and excessive fat accumulation, and lipoatrophy, the noticeable, localized loss of fat tissue under the skin. In patients with lipohypertrophy, fat accumulation occurs mostly around the waist and may also occur in other regions, including breast tissue and in dorsocervical tissues in the neck, resulting in a “buffalo hump”. Excess fat also appears as lipomas, or benign tumors composed of fat cells. In patients with lipoatrophy, the loss of fat tissue generally occurs in the limbs and facial area.

In HIV-infected patients, lipodystrophy may be caused by the viral infection itself, the use of antiretroviral therapy, or both. Recent data suggest that different pathophysiological mechanisms are involved in the development of lipohypertrophy and lipoatrophy. The most common statistically significant independent risk factors identified for lipohypertrophy are duration of antiretroviral therapy, markers of disease severity and protease inhibitor use. Other factors include age, genetics, and gender.

Tesamorelin - Our Lead Compound

Tesamorelin is a stabilized 44 amino acid human GRF analogue, which was synthesized in our laboratories in 1995 using our long-acting peptide method. Although natural peptides have significant therapeutic potential, they are subject to enzymatic degradation which severely limits their effectiveness in clinical use. Our long-acting peptide method is a peptide stabilization process which

increases the target protein's resistance to enzymatic degradation, while maintaining its natural specificity. This usually results in a more stable and efficient compound, which can thus prolong its duration of action. Tesamorelin induces growth hormone secretion in a natural and pulsatile way. The clinical results obtained to date using tesamorelin suggest a therapeutic potential in both anabolic and lipolytic indications.

Mechanism of action

In vitro, tesamorelin binds and stimulates human GRF receptors with similar potency as the endogenous GRF. GRF is a hypothalamic peptide that acts on the pituitary somatotroph cells to stimulate the synthesis and pulsatile release of endogenous growth hormone, which is both anabolic and lipolytic. Growth hormone exerts its effects by interacting with specific receptors on a variety of target cells, including chondrocytes, osteoblasts, myocytes, hepatocytes, and adipocytes, resulting in a host of pharmacodynamic effects. Some, but not all these effects, are primarily mediated by insulin-like growth factor one, IGF-1, produced in the liver and in peripheral tissues.

The effects of recombinant human growth hormone, or rhGH, and tesamorelin have been the subject of several clinical trials in the area of HIV-associated lipodystrophy. Based on these clinical trials, the safety profiles of rhGH and tesamorelin appear to be very different. The natural synthesis of growth hormone is regulated by a feedback mechanism preventing its overproduction. Tesamorelin induces optimal activity of the somatotrope function and retains the natural rhythm (pulsatility) of the physiological secretion of growth hormone without interfering with the feedback mechanism mentioned above. With the exogenous administration of rhGH, the feedback mechanisms are short-circuited, which gives rise to higher levels of growth hormone. The side effects associated with rhGH include nerve, muscle or joint pain, swelling due to fluid retention (edema), carpal tunnel syndrome, numbness and tingling of skin and increased risk of diabetes. These side effects are particularly frequent among older people. In addition, rhGH can cause hyperglycemia which makes it contraindicated for patients with diabetes or pre-diabetic conditions.

Third-Party Studies Evaluating Tesamorelin

On July 23 2014, the results of a study entitled "Effect of Tesamorelin on Visceral Fat and Liver Fat in HIV-Infected Patients with Abdominal Fat Accumulation, A Randomized Clinical Trial" were published in the Journal of the American Medical Association (JAMA) by Dr. Steven K. Grinspoon of the Massachusetts General Hospital (JAMA, 2014;312(4):380-389).

The purpose of the study was to evaluate the effectiveness of a synthetic analog of growth hormone-releasing hormone, tesamorelin, in decreasing the amount of liver fat in antiretroviral-treated HIV-infected men and women with abdominal fat accumulation. This placebo-controlled study enrolled a total of 50 HIV-infected patients at Massachusetts General Hospital in Boston. Participants were randomized to receive tesamorelin, 2mg (n=28), or placebo (n=22), subcutaneously daily for 6 months. This placebo-controlled study demonstrated that, among antiretroviral-treated HIV-infected men and women with abdominal fat accumulation, tesamorelin reduced visceral adipose tissue (VAT) and liver fat over a 6-month period. Fasting glucose increased in the tesamorelin group at 2 weeks but changes at 6 months in fasting glucose and 2-hour glucose were not significant. Further studies are needed to determine the clinical importance and long-term consequences of reduction in visceral and liver fat in HIV-infected patients with abdominal fat accumulation.

On June 27, 2012 we announced the results of a study led by Dr. Steven K. Grinspoon of the Massachusetts General Hospital and entitled "Physiologic Effects of Long-Term GHRH 1-44 in Abdominal Obesity". The purpose of this study was to evaluate the effectiveness of synthetic growth-hormone releasing hormone in decreasing the amount of abdominal fat and improving cardiovascular function in obese subjects with relative reductions in growth hormone. This placebo-controlled study

demonstrated that, among obese subjects with relative reductions in growth hormone, tesamorelin selectively reduces VAT in the abdominal area, without significant effects on SAT. Tesamorelin was also shown to improve triglycerides, C-reactive protein and carotid intima medial thickness, without aggravating glucose. These data suggest a functional consequence of reduced GH secretion in obesity and may demonstrate an improved cardiovascular disease, or CVD, risk profile. In addition, this study suggests, more broadly, that strategies to selectively reduce VAT and spare SAT may improve CVD risk in obesity. The results occurred in the context of a dosing algorithm designed to keep insulin-like growth factor-1 within the normal physiological range. The study was published in the "Journal of Clinical Endocrinology & Metabolism" (Makimura H et al. *J Clin Endocrinol Metab* 2012 Dec; 97(12):4769-4779).

On July 19, 2011, we announced the results of the independent Somatotrophics, Memory, and Aging Research Trial led by Dr. Michael V. Vitiello of the University of Washington in Seattle. The purpose of this single-center, randomized, double-blind, placebo-controlled Phase 2 clinical trial was to evaluate the effect of tesamorelin on cognitive function in healthy older adults and older adults with mild cognitive impairment, or MCI, also known as pre-Alzheimer's syndrome. A total of 152 older adults, half of whom were cognitively normal and half of whom were diagnosed with MCI, received either tesamorelin or a placebo. Tesamorelin improved executive function (response inhibition, set-shifting, and working memory) in both cognitively normal healthy older adults and in adults with MCI. Tesamorelin also improved delayed verbal recall in adults with MCI. This study is the first to demonstrate that short-term administration of a human growth releasing factor analogue improves executive function (the control or management of cognitive functions and processes) for both cognitively normal and memory-impaired older adults, and has an additional effect on verbal memory for MCI adults, who are at high risk for progression to Alzheimer's dementia. The study was published in the journal "Archives of Neurology" (Baker L et al. *Arch Neurol* 2012;69(11):1420-1429).

We are not currently developing tesamorelin in patients suffering from excessive liver fat, obesity or MCI.

Other Compounds

In the course of the current financial year, we intend to reassess our strategy with our compounds. As of the date of this AIF, all of our research and development activities have been suspended.

TH1173 – Our Second Generation GRF

In 2012, we pursued and completed preclinical work on TH1173, our second generation GRF and the results obtained warrant the pursuit of the Phase 1 clinical program for TH1173. On January 29, 2013, the USPTO issued a composition of matter patent for TH1173, scheduled to expire in 2032.

New GRF Peptides

In addition to TH1173, we have identified a number of new GRF peptides. These peptides are at the discovery stage.

Acute Kidney Injury

AKI is the acute deterioration of kidney function leading to increased urea waste products and electrolyte imbalance in blood. AKI is common among hospitalized patients and complicates the management of patients in intensive care units. Despite hospitalization and renal replacement, the mortality rate is high for dialyzed patients.

We have developed novel peptides specifically tailored for the prevention or treatment of AKI. One of these peptides, TH0673, is a bifunctional peptide that is currently in preclinical development. We have

tested TH0673 in animal models of AKI and have found that it increases creatinine clearance, improves excretion of nitrogenous waste compounds and limits kidney damage.

Melanotransferrin

In November 2010, we entered into a discovery and collaboration agreement with Université du Québec à Montréal, Gestion Valeo and Transfert Plus L.P. in connection with research led by Dr. Richard Béliveau seeking to discover short peptide mimics of melanotransferrin for the development of a new cancer treatment. Melanotransferrin is related to the transferrin family of proteins and is expressed normally in melanocytes, but also in several cancer cells. Dr. Béliveau's research has demonstrated that soluble melanotransferrin reduces cell migration, invasion and angiogenesis, which are hallmarks of tumorigenesis and metastasis.

Our research identified several small peptides from the melanotransferrin protein which could replicate the functions of the full length protein. To date, we have assessed the *in vivo* biologic efficacy of these peptides, and the results obtained lead us to believe that these peptides have certain anti-tumoral characteristics. However, further research and development on these peptides, including toxicology and pharmacology studies, need to be conducted.

Under the terms of this agreement, as consideration for our research, we were granted an undivided 50% interest in the short peptide mimics that we discovered and an option to acquire the remaining 50% undivided interest from Transfert Plus L.P. and a 100% interest in the melanotransferrin technology. We exercised the option on July 10, 2013. We now have until October 2015 to license our research and development rights for such peptides to a third party, failing which we will have to retrocede to Transfert Plus L.P. a 50% undivided interest in the small peptides we discovered and the 100% interest in the melanotransferrin technology.

2.6 COMMERCIALIZATION ACTIVITIES

United States

General

Since May 1, 2014, we are responsible for the commercialization of *EGRIFTA*[™] (tesamorelin for injection) in the United States and the conduct of the Observational Study and Retinopathy Study. We regained our commercialization rights to *EGRIFTA*[™] pursuant to the EMD Serono Termination Agreement. The EMD Serono Termination Agreement provided for the termination of the EMD Serono Agreement.

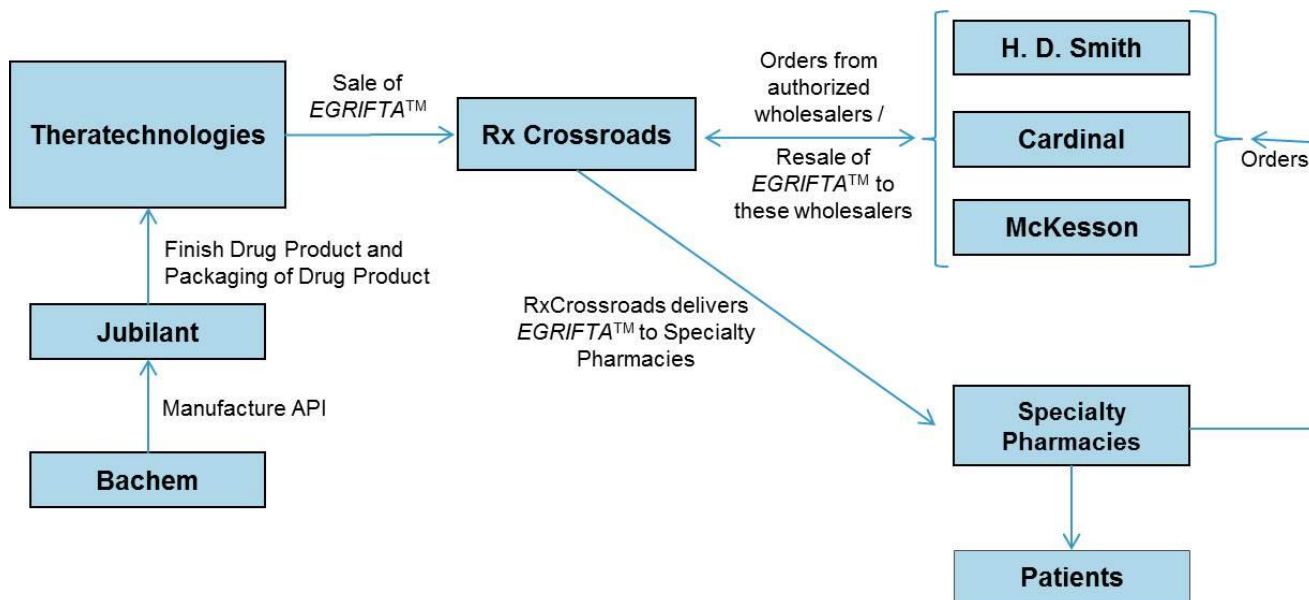

Under the terms of the EMD Serono Termination Agreement, we agreed to pay an early termination fee of US \$20,000,000, or Early Termination Fee, in equal installments of US \$4,000,000 over a five-year period starting on May 1, 2015 and, thereafter, on May 1, 2016, 2017, 2018 and 2019. We also agreed to pay EMD Serono an increasing royalty, or Royalties, based on annual net sales. The Royalties will be paid until a confidential cumulative aggregate amount is reached or until January 1, 2024, the first of these events to occur. We restructured the amount and payment terms of the initial US \$4,000,000 payment due May 1, 2015 as part of our long-term obligation. The Early Termination Fee now amounts to US \$20,167,808 and the first payment now amounts to US \$4,167,808 and is payable in three tranches of US \$500,000 on May 1, 2015, US \$1,550,548 on August 31, 2015 and US \$2,117,260 on November 30, 2015. The balance of the amount and the other payment terms of the long-term obligation remain unchanged.

In order to secure the payment of the Early Termination Fee, the Corporation agreed to grant EMD Serono a security interest on its present and future worldwide corporeal and incorporeal

movable property related to tesamorelin until such time as the amount of US \$20,167,808 has been reimbursed in full to EMD Serono. Thereafter, the Corporation and EMD Serono agreed to reduce the security interest to all present and future corporeal and incorporeal movable property related to tesamorelin in the United States only to secure the payment of the Royalties.

The EMD Serono Termination Agreement contains a five (5) year non-compete undertaking by EMD Serono in favor of the Corporation, customary representations and warranties and indemnity provisions. In addition, the EMD Serono Termination Agreement provides that in the event there occurs a change of control of the Corporation within eighteen (18) months of May 1, 2014, EMD Serono has the option to accelerate the full payment of the Early Termination Fee and to seek the payment of an amount intended to equal the net present value of the maximum future Royalties. If such change of control occurs more than eighteen (18) months after May 1, 2014, EMD Serono has the option to receive the payment of all of the unpaid Early Termination Fee.

Following the execution of the EMD Serono Termination Agreement, we began establishing the organizational structure necessary to commercialize *EGRIFTA*TM in the United States. The graph below illustrates the supply chain and commercialization process of *EGRIFTA*TM in the United States.

Manufacturing

We do not own or operate commercial scale manufacturing facilities for the production of our product or any of our compounds, nor do we have plans to develop our own manufacturing operations in the foreseeable future. We currently depend on third-party service providers for all of our required raw materials, drug substance and finished product for commercial sale and clinical trials and we have entered into supply agreements with those third-party service providers.

We are responsible for the manufacture and supply of tesamorelin to ensure the commercialization of *EGRIFTA*TM in the United States and in Canada, if approved. We are also responsible for the manufacture and supply of *EGRIFTA*TM under the Sanofi Agreement.

We currently manufacture *EGRIFTA*TM in a 1 mg/vial presentation. This presentation was initially used when we launched *EGRIFTA*TM in January 2011 until we switched to a 2 mg/vial presentation pursuant to a post-approval commitment made to the FDA at the time *EGRIFTA*TM was approved. As a result of the manufacturing issues we encountered in 2013 with the 2 mg/vial presentation, we reverted back to the use of the original 1 mg/vial presentation. However, we remain committed to

reverting to a 2 mg/vial presentation of *EGRIFTA*[™] and have made a proposal in this regard to the FDA. As of the date of this AIF, we are waiting for feedback from the FDA on our proposal.

We currently have approximately four months' supply of *EGRIFTA*[™]. We believe we have sufficient quantities of *EGRIFTA*[™] available to meet both current and anticipated market demand and maintain adequate inventory levels.

Bachem

We have an agreement with Bachem, Inc., an American subsidiary of Swiss-based Bachem AG, providing for the manufacturing and supply of the active pharmaceutical ingredient of tesamorelin, or API, for *EGRIFTA*[™] for commercial sale in the United States and for clinical programs. Bachem is our only validated supplier of raw materials. The price of tesamorelin manufactured by Bachem has been set under our agreement and is not subject to volatility. The agreement is scheduled to terminate with the expiry of US patent 5,861,379, or May 2020, unless earlier terminated by the parties.

Jubilant

We have an agreement with Jubilant HollisterStier General Partnership (formerly Draxis Pharma General Partnership) providing for the manufacture and supply of the finished form of *EGRIFTA*[™] for commercial sale in the United States and for tesamorelin for clinical programs. Under our agreement, Jubilant must fill vials with tesamorelin, lyophilize it, label and package those vials and deliver them to locations in accordance with our instructions. The agreement is scheduled to terminate with the expiry of US patent 5,861,379, or May 2020, unless earlier terminated by the parties. If the agreement is not terminated by the parties prior to its term, it will automatically renew for successive 12-month periods unless a party provides the other with a prior written notice within a confidential time period before the termination of the agreement.

Becton Dickinson

On November 6, 2009, we entered into a supply agreement with Becton Dickinson Canada Inc., or Becton Dickinson. Under this agreement, Becton Dickinson is responsible for supplying us with syringes and hypodermic needles which are provided with *EGRIFTA*[™] in the United States. The agreement has been in force since 2009 and renews automatically for successive 12-month periods on November of each year unless a party provides the other with a prior written notice within a confidential time period before the renewal of the agreement.

Hospira

On March 26, 2009, we entered into development and supply agreements with Hospira Worldwide, Inc., or Hospira. Under these agreements, Hospira is responsible for manufacturing and supplying us with sterile water for injection, filled and finished in plastic vials, in connection with the sale of *EGRIFTA*[™] in the United States. Hospira is also responsible for packaging syringes, needles, sterile water for injection and patient inserts in connection with the sale of *EGRIFTA*[™] in the United States. On October 17, 2013, we and Hospira amended these development and supply agreements to extend their term until March 25, 2015. On February 24, 2015, we terminated our agreement with Hospira pursuant to which they were packaging syringes, needles, sterile water for injection and patient inserts and found another third-party service provider that will perform the same tasks. We are currently in negotiation with Hospira with respect to the manufacture and supply of sterile water for injection.

Distribution

In connection with our commercialization of *EGRIFTA*[™] in the United States, we have entered into

various agreements with third-party service providers to distribute our product to patients. The distribution of *EGRIFTA*[™] is tightly controlled and is only available in certain selected pharmacies. Below is a description of the agreements entered into with our third-party service providers forming part of our supply chain for *EGRIFTA*[™].

RxCrossroads

On May 12, 2014, we entered into a master services agreement with RxCrossroads, along with two statements of work, or RxCrossroads Agreements. Under the terms of the RxCrossroads Agreements, RxCrossroads acts as our exclusive third-party logistic service provider for all of our products in the United States and as such, provides warehousing and logistical support services to the Corporation, including inventory control, account management, customers support, product return management and fulfillment of orders.

Under the RxCrossroads Agreements, RxCrossroads also acts as our exclusive first-party distributor of *EGRIFTA*[™] in the United States. In such role, RxCrossroads purchases *EGRIFTA*[™] from us and takes title thereto once an authorized wholesaler places an order with RxCrossroads. RxCrossroads then delivers *EGRIFTA*[™] directly to that authorized wholesaler's client, namely a specialty pharmacy forming part of our network of specialty pharmacies.

The RxCrossroads Agreements have a three-year term and will expire on August 25, 2017. The RxCrossroads Agreements contain customary representations and warranties from both parties, indemnification provisions as well as termination provisions in the event of the occurrence of certain events.

H.D. Smith

On September 1, 2014, we entered into a wholesaler services agreement with H.D. Smith, or H.D. Smith Agreement, appointing H.D. Smith as a non-exclusive authorized wholesaler for *EGRIFTA*[™] in the United States. Under the terms of the H.D. Smith Agreement, H.D. Smith is authorized to accept orders for *EGRIFTA*[™] from specialty pharmacies, purchase *EGRIFTA*[™] from RxCrossroads and resell it to those specialty pharmacies.

The H.D. Smith Agreement has a one-year term and automatically renews for subsequent one-year period unless a party provides the other with a prior written notice within a confidential time period prior to the termination or renewal period of the agreement. The H.D. Smith Agreement contains customary representations and warranties from both parties, payment terms, indemnification provisions as well as termination provisions in the event of the occurrence of certain events.

Cardinal

On August 15, 2014 and on October 23, 2014, we entered into a wholesale drop shipment agreement and a drop ship only services agreement with Cardinal, or Cardinal Agreements. Under the terms of the Cardinal Agreements, we appointed Cardinal as a non-exclusive authorized wholesaler for *EGRIFTA*[™] in the United States. As an authorized wholesaler, Cardinal is authorized to accept orders for *EGRIFTA*[™] from specialty pharmacies, purchase *EGRIFTA*[™] from RxCrossroads and resell it to those specialty pharmacies.

The Cardinal Agreements have a one-year term and automatically renew for subsequent one-year period unless a party provides the other with a prior written notice within a confidential time period prior to the termination or renewal period of the agreements. The Cardinal Agreements contain customary representations and warranties from both parties, payment terms, indemnification provisions as well as termination provisions in the event of the occurrence of certain events.

McKesson

On May 15, 2014, we entered into a core distribution agreement with McKesson, or McKesson Agreement, appointing McKesson as a non-exclusive authorized wholesaler for *EGRIFTA*[™] in the United States. Under the terms of the McKesson Agreement, McKesson is authorized to accept orders for *EGRIFTA*[™] from specialty pharmacies, purchase *EGRIFTA*[™] from RxCrossroads and resell it to those specialty pharmacies.

The McKesson Agreement has an indefinite term but may be terminated at any time by either party upon written notice to the other. However, in the event that we were in the process of being acquired, the McKesson Agreement may not be terminated by us without cause for twelve (12) months following the acquisition. The McKesson Agreement contains customary representations and warranties from both parties, payment terms, indemnification provisions as well as termination provisions in the event of the occurrence of certain events.

Specialty Pharmacies

We have entered into various agreements with specialty pharmacies across the United States providing for their rights to order *EGRIFTA*[™] from our authorized wholesalers and distribute *EGRIFTA*[™] to patients in the United States through their networks of local pharmacies.

Marketing and Sales

Our marketing partner in the United States is Ventiv Commercial Services, LLC, or inVentiv Health, a recognized provider of commercial, clinical and consulting services around the globe. We have entered into a master service agreement with inVentiv Health, or inVentiv Agreement, as of December 10, 2013, pursuant to which inVentiv Health is providing us with various services in connection with the commercialization of *EGRIFTA*[™] in the United States. Initially, inVentiv Health helped us to establish the infrastructure needed to effectively market *EGRIFTA*[™], including negotiation support with wholesalers, specialty pharmacies and other entities involved in the commercialization and distribution activities. They also helped us early on to develop an appropriate series of *EGRIFTA*[™] marketing tools.

With the infrastructure now in place, the ongoing services provided by inVentiv Health include provision of a sales force fully dedicated to *EGRIFTA*[™], as well as other staff solely assigned to our business in medical science liaison, reimbursement, and communications with patients and health-care professionals. The communications aspect include a call center, *EGRIFTA Assist*[™], which guides physicians and patients through the process of initiating treatment under reimbursement. This process, which can be complex and time-consuming, begins with a statement of medical necessity and concludes with the final reimbursement decision. inVentiv Health also assists us with pharmacovigilance activities and with other regulatory matters that may arise.

The inVentiv Agreement contains customary representations and warranties, indemnification, confidentiality, intellectual property and termination provisions. The inVentiv Agreement has a three year term, unless earlier terminated.

Canada

Since April 30, 2014, we are responsible for the commercialization of *EGRIFTA*[™] in Canada after we regained all commercialization rights to *EGRIFTA*[™] further to our entering into a termination agreement with Actelion to terminate the supply, distribution and licensing agreement entered into with Actelion on February 20, 2012, or Actelion Agreement.

EGRIFTA[™] was approved for commercialization in Canada on April, 30 2014 following the issuance of a NOC by Health Canada. The NOC received approves the commercialization of *EGRIFTA*[™] in its 2 mg/vial presentation. Further to our decision to revert to the manufacture of *EGRIFTA*[™] in a 1 mg/vial presentation, we filed a SNDS with Health Canada in August 2014 seeking approval to commercialize *EGRIFTA*[™] in Canada in its 1 mg/vial presentation. We also filed an application with Health Canada for the delivery of a drug establishment license permit in Canada in order to authorize us to sell *EGRIFTA*[™] in Canada. Finally, as a result of recent changes in the Canadian regulation, we filed an application with Health Canada to authorize us to import the API stored at Bachem in the United States into Canada that we may need in order to manufacture *EGRIFTA*[™]. To date, we are awaiting a response from Health Canada on those applications.

Since the filing of the SNDS with Health Canada, we began preparing for the potential market launch of *EGRIFTA*[™] in Canada which will initially focus on reimbursement by private drug plans, as opposed to public payors. We will be working with patient groups and key opinion leaders in the medical community to develop awareness of the disease and the availability of *EGRIFTA*[™] for its treatment.

Latin America, Africa and the Middle East

On December 6, 2010, we entered into the Sanofi Agreement granting sanofi the exclusive commercialization rights to *EGRIFTA*[™] in Latin America, Africa and the Middle East.

Under the terms of the Sanofi Agreement, we will sell *EGRIFTA*[™] to sanofi at a transfer price equal to the higher of a percentage of sanofi's net selling price and a predetermined floor price. sanofi will be responsible for conducting all regulatory and commercialization activities for *EGRIFTA*[™] in the territories covered by to the Sanofi Agreement. We will be responsible for the manufacture and supply of *EGRIFTA*[™] to sanofi. We have retained all development rights to tesamorelin for other indications and will be responsible for conducting development activities for any additional potential indications. We also granted sanofi an option to commercialize tesamorelin for other indications in the territories mentioned above. If such option is not exercised, or is declined, by sanofi, we may commercialize tesamorelin for such indications on our own or with a third party. The initial term of the Sanofi Agreement extends until December 2020.

To date, sanofi has filed marketing authorization applications in Argentina, Brazil, Colombia, Israel, Mexico and Venezuela. Within the sanofi territory, the largest potential markets for *EGRIFTA*[™] are in Latin America, most notably Mexico and Brazil, and sanofi is focusing its efforts on these two markets. As of today, all marketing authorization applications filed in Argentina, Colombia and Venezuela have been abandoned.

In Mexico, sanofi is currently responding to a series of administrative questions raised by the Mexican regulatory authority and sanofi has informed us that a decision could be reached around mid-2015.

The regulatory review process in Brazil slowed after ANVISA audited our Montreal-based third-party manufacturer, Jubilant, and identified technical deficiencies. All of the corrective measures designed to address ANVISA's deficiencies were implemented and ANVISA issued a certificate of compliance with Brazil's good manufacturing practices to Jubilant in May 2014. Based on the information presently available, we are not able to predict timelines for a decision by ANVISA on sanofi's currently pending marketing authorization application.

In both Mexico and Brazil, marketing authorization applications have been filed with the 2 mg/vial presentation, which is no longer being supplied. As such, in the event that approvals are granted by the authorities in these countries, sanofi will need to take the necessary steps to seek approval of the then-current presentation of *EGRIFTA*[™].

In Israel, the Minister of Health cancelled the approval for registration of *EGRIFTA*[™] after a review of the data on file and after considering that the registration process was halted in Europe. Sanofi has advised us that it is assessing the opportunity to appeal the Israeli decision.

Europe

In Europe, we are actively seeking a commercial partner to distribute *EGRIFTA*[™] through named patient sales programs in the short term and by pursuing marketing authorizations on a country-by-country basis in the longer term.

Other Territories

We have retained full commercial rights for *EGRIFTA*[™] in unpartnered territories and we may seek partners for the commercialization of *EGRIFTA*[™] in those territories.

2.7 COMPETITION

The pharmaceutical industry is characterized by intense competition and rapid innovation. Our potential competitors include large pharmaceutical and biotechnology companies, specialty pharmaceutical and generic drug companies, academic institutions, government agencies and research institutions, many of whom have greater financial, technical and human resources than us. We believe the key competitive factors that will affect the commercial success of *EGRIFTA*[™] are efficacy, safety and tolerability profile, reliability, product acceptance by patients, physicians and other healthcare providers, convenience of dosing, price and reimbursement.

We are not aware of other GRF products indicated for the reduction of excess abdominal fat in HIV-infected patients with lipodystrophy being commercialized. However, we may face indirect competition for *EGRIFTA*[™] from other drugs, such as human growth-hormone, testosterone and insulin sensitizing agents that may be prescribed by physicians. To our knowledge, the use of these other drugs for the reduction of excess abdominal fat in HIV-infected patients with lipodystrophy has not been approved by the FDA or any other regulatory authority. Other approaches to reduce excess abdominal fat include coping mechanisms such as lifestyle modification (diet and exercise), switching antiretroviral therapy, or liposuction.

We are aware that Aileron Therapeutics, Inc. may seek to develop its GRF peptide, ALRN-5281, for the treatment of HIV-associated lipodystrophy. Based on publicly available information, Aileron has initiated Phase 1 development for this peptide.

2.8 GOVERNMENT REGULATION

Overview

The research, development, manufacture and marketing of pharmaceutical products are governed by various governmental authorities throughout the world to ensure efficacy and safety.

Governmental authorities in the United States at the federal, state and local level, and other countries, extensively regulate, among other things, the research, development, testing, manufacture, quality control, approval, labeling, packaging, storage, record-keeping, promotion, advertising, distribution, marketing, export and import of products, such as *EGRIFTA*[™] and any other compound that we may develop. The process of obtaining regulatory approvals and the subsequent compliance with appropriate federal, state, local and foreign statutes and regulations require the expenditure of substantial time and financial resources. Failure to comply with the applicable requirements at any time during the product development process, approval process or after approval, may subject an applicant to administrative or judicial sanctions. Sanctions could include, but are not limited to, refusal

to approve pending applications, withdrawal of an approval, a clinical hold, warning letters or other enforcement letters, product recalls, import/export delays, product seizures, total or partial suspension of production or distribution injunctions, fines, refusals of government contracts, and government reimbursement, restitution, disgorgement or civil or criminal penalties.

The text below explains some of the most important features of government regulations that we must follow in connection with the commercialization of *EGRIFTA*[™] in the United States.

Sales and Marketing Regulation

We are subject to various United States regulations relating to the sales and marketing of *EGRIFTA*[™] in the United States. The FDA regulates all advertising and promotion activities for products under its jurisdiction both prior to and after approval. We can make only those claims relating to safety and efficacy that are approved by the FDA. *EGRIFTA*[™] may be promoted only for the approved indications and in accordance with the provisions of the approved label. The FDA, as well as other government authorities, actively enforces the laws and regulations prohibiting the promotion of off-label uses, and if we are found to have improperly promoted off-label uses, we may be subject to significant sanctions. The FDA does not regulate the practice of medicine by physicians in their choice of treatment, but FDA regulations do impose stringent restrictions on manufacturers' communications regarding off-label uses. Failure to comply with applicable FDA requirements may subject us to adverse publicity, enforcement action by the FDA, corrective advertising, and the full range of civil and criminal penalties available to the FDA.

The marketing of *EGRIFTA*[™] within the United States is also subject to various federal and state laws pertaining to health care "fraud and abuse," including anti-kickback laws and false claims laws. Anti-kickback laws make it illegal for a prescription drug manufacturer to solicit, offer, receive, or pay any remuneration in exchange for, or to induce or reward, the referral of business, including the purchase or prescription of a particular drug. Due to the breadth of the statutory provisions, it is possible that we might be challenged under anti-kickback or similar laws. Sanctions under these laws include civil monetary penalties, exclusion from U.S. federal and state healthcare programs (i.e., those programs will not provide reimbursement or payment coverage for *EGRIFTA*[™]), and criminal penalties including imprisonment. False claims laws prohibit anyone from knowingly and willingly presenting, or causing to be presented for payment to third-party payors (including Medicare and Medicaid) claims for reimbursement for drugs or services that are false or fraudulent. Generally, claims for drugs prescribed for off-label uses may be considered to be "false claims". Sanctions under false claims laws include significant civil monetary penalties.

In addition, several states require that companies implement compliance programs or comply with industry ethics codes, adopt spending limits, and report to state governments any gifts, compensation, and other remuneration provided to certain healthcare professionals. Regulations implementing certain provisions of the recently enacted health care reform legislation will require record-keeping and disclosure to the federal government of certain transfers of value to U.S.-licensed physicians and teaching hospitals. Any activities relating to the sale and marketing of *EGRIFTA*[™] may be subject to scrutiny under these laws. Failure to make these required reports or comply with these states laws can result in civil monetary penalties. If the government were to allege or convict us of violating these laws, our business could be harmed. In addition, there is ability for private individuals to bring similar actions.

Good Manufacturing Practices

Drug products must be manufactured in accordance, among other things, with good manufacturing practices, or GMP, and both Bachem and Jubilant must adhere to GMP in connection with the manufacture of tesamorelin and the finish product, *EGRIFTA*[™]. If a company wants to make certain changes in its manufacturing equipment, location or process, regulatory review and approval may be required. The FDA often conducts audits of manufacturing sites to ensure that manufacturers comply

with its regulation and the GMP. If, as a result of these inspections, it is determined that a manufacturer's equipment, facilities or processes do not comply with the regulations and conditions of product approval, the FDA may seek civil, criminal or administrative sanctions and/or remedies against the manufacturer, including the suspension of manufacturing operations.

Good Clinical Practices

The FDA promulgates regulations and standards, commonly referred to as good clinical practices, or GCP, for designing, conducting, monitoring, auditing and reporting the results of clinical trials to ensure that the data and results are accurate and that the trial participants are adequately protected. Both our Observational Study and Retinopathy Study are subject to GCP. The FDA enforces GCP through periodic inspections of trial sponsors, principal investigators and trial sites. We rely on inVentiv Health to conduct our Observational Study and our Retinopathy Study. If our study sites fail to comply with applicable GCP, the clinical data generated in our clinical trials may be deemed unreliable and the FDA may require us, among others, to redo our studies.

2.9 PHARMACEUTICAL PRICING AND REIMBURSEMENT

In the United States and in other countries, sales of *EGRIFTA*[™] and our other product candidates will depend in part on the availability of reimbursement from third-party payors. Third-party payors include government health administrative authorities (such as the Centers for Medicare & Medicaid Services in the United States), managed care providers, private health insurers and other organizations.

These third-party payors are increasingly challenging the price and examining the cost-effectiveness of medical products and services. In addition, significant uncertainty exists as to the reimbursement status of newly approved healthcare product candidates. We, or our commercial partner, may need to conduct expensive pharmacoeconomic studies in order to demonstrate the cost-effectiveness of *EGRIFTA*[™]. *EGRIFTA*[™] may not be considered cost-effective. It is time consuming and expensive for us, and our commercial partner, to seek reimbursement from third-party payors. Reimbursement may not be available or sufficient to allow us to sell *EGRIFTA*[™] on a competitive and profitable basis.

United States

The U.S. Congress, state legislatures, and federal and state agencies from time to time propose and adopt initiatives aimed at cost containment, which could impact our ability to sell *EGRIFTA*[™] profitably. For example, in March 2010, President Obama signed into law the *Patient Protection and Affordable Care Act*, and the associated reconciliation bill, which we refer to collectively as the *Health Care Reform Law*, a sweeping law intended to broaden access to health insurance, reduce or constrain the growth of healthcare spending, enhance remedies against fraud and abuse, add new transparency requirements for healthcare and health insurance industries, impose new taxes and fees on the health industry and impose additional health policy reforms. Effective October 1, 2010, the *Health Care Reform Law* revised the definition of "average manufacturer price" for reporting purposes, which could increase the amount of Medicaid drug rebates we must pay to states. Further, the new law imposes a significant annual fee on companies that manufacture or import certain branded prescription drug products and biologic agents. Substantial new provisions affecting compliance also have been enacted, which may require us to modify our business practices with healthcare practitioners, and also may increase our regulatory burdens and operating costs.

The U.S. Medicare program provides payment for most pharmaceuticals under the Medicare Part D program. Under Part D, Medicare beneficiaries may enroll in prescription drug plans offered by private entities which will provide coverage of outpatient prescription drugs. Part D plans include both stand-alone prescription drug benefit plans and prescription drug coverage as a supplement to Medicare Advantage plans. Part D coverage is not standardized. Part D prescription drug plan sponsors are not required to pay for all covered Part D drugs, and each drug plan can develop its own drug formulary

that identifies which drugs it will cover and at what tier or level. However, Part D prescription drug formularies must include drugs within each therapeutic category and class of covered Part D drugs, though not necessarily all the drugs in each category or class. Any formulary used by a Part D prescription drug plan must be developed and reviewed by a pharmacy and therapeutic committee.

Under Part D, government payment for some of the costs of prescription drugs may increase demand for products for which we receive marketing approval. However, any negotiated prices for our products covered by a Part D prescription drug plan will likely be lower than the prices we might otherwise obtain. Moreover, while Part D applies only to drug benefits for Medicare beneficiaries, private payors often follow Medicare coverage policy and payment limitations in setting their own payment rates. Any reduction in payment that results under Part D may result in a similar reduction in payments from non-governmental payors.

The cost of pharmaceuticals continues to generate substantial governmental and third-party payor interest. We expect that the pharmaceutical industry will experience pricing pressures due to the trend toward managed healthcare, the increasing influence of managed care organizations, and additional legislative proposals. Indeed, we expect that there will continue to be a number of U.S. federal and state proposals to implement governmental pricing controls and limit the growth of healthcare costs, including the cost of prescription drugs.

Countries other than the United States

Outside of the United States, sales of *EGRIFTA*[™] will depend in part on the availability and level of reimbursement from third-party payors. Third-party payors can be public or private or a combination of both. In order to obtain public reimbursement, prescription drugs are often evaluated by specialized bodies in a country. This process is in many cases independent of marketing approval and the time to carry out the evaluation differs in each country, often extending beyond the initial regulatory approval date of the drug.

The requirements and aspects considered during the assessment of a new prescription drug are not necessarily the same in each country and are given different weight depending on the countries' attitudes towards providing public healthcare and the government's willingness to pay for these new drugs. We or our commercial partner could be required to conduct specific health economic and other studies or analyses in order to satisfy such requirements. The decision to comply with such requirements will depend on the prospects of obtaining a positive opinion and the costs involved in the process and the profitability of the market.

In many jurisdictions, pricing plays an important role in the evaluation of prescription drugs for reimbursement and in most cases, there are price controls that can include, but are not limited to, reference pricing to drugs sold within the country and in other countries, the evaluation of what a fair price would be based on the condition that is being treated and innovative quality of the new drug.

Many countries have initiated cost-cutting measures which have been reflected in reduced budgets for drugs, higher discounts imposed on manufacturers and price negotiations between authorities and manufacturers among other actions. We expect the current reimbursement evaluation process and pricing policies to keep evolving in ways that we may not foresee.

Pursuant to the Sanofi Agreement, sanofi is responsible for identifying and obtaining possible reimbursements under government programs in the territories covered under the Sanofi Agreement.

2.10 INTELLECTUAL PROPERTY

Our Current Patent Portfolio

Our current patent portfolio is comprised of patents and patent applications for the following compounds:

Tesamorelin

- In the United States, we own US patent 5,861,379 covering the composition of matter of tesamorelin, which is scheduled to expire in May 2020 after having obtained a patent term extension certificate from the USPTO for such patent. In addition, we own three issued United States patents relating to the use of tesamorelin in the treatment of HIV-associated lipodystrophy, which are scheduled to expire in 2023, as well as a patent relating to the use of tesamorelin in the treatment of mild cognitive impairment that is scheduled to expire in 2025. Furthermore, we have a patent set to expire in 2027 that relates to the use of tesamorelin in the improvement of muscle function in subjects suffering from severe wasting. Finally, we have a patent on a new formulation of tesamorelin scheduled to expire in 2033.
- In Canada, we own a patent covering the composition of matter of tesamorelin, which is scheduled to expire in 2016, a patent relating to the use of tesamorelin in the treatment of metabolic conditions associated with fat accumulation and/or hypercholesterolemia, including HIV-associated lipodystrophy, which is scheduled to expire in 2024, as well as a patent relating to the use of tesamorelin in the treatment of mild cognitive impairment that is set to expire in 2023.
- In Mexico, we own a patent covering the composition of matter of tesamorelin, which is scheduled to expire in May 2016. We own one patent related to the use of tesamorelin in the treatment of HIV-associated lipodystrophy which is scheduled to expire in 2025.
- In Brazil, we have obtained a patent covering the composition of matter of tesamorelin which is scheduled to expire in 2019. However, in Brazil, INPI is judicially challenging all pharmaceutical-related patents that stem from applications filed between 1995 and 1997 that were granted a term in excess of 20 years from the filing date by alleging that they are either invalid or that their terms should be reduced to 20 years from the filing date. The Brazilian courts ruled against the argument of INPI and INPI has appealed the case. The case was scheduled to be heard in October 2014 but the hearing was suspended following the filing of a brief by an association of generic pharmaceutical companies seeking to support the arguments of INPI. There has been no development since the suspension of the hearing. We have not filed any documents in connection with this challenge given that there is a representative from one pharmaceutical company that contests the arguments of INPI which, if successful, could maintain the validity and the 2019 expiration date of our patent in Brazil.
- In Europe, tesamorelin is covered by a granted patent validated in various European countries, which is scheduled to expire in 2016.

TH1173

- We have obtained from the USPTO a patent covering the composition of matter of TH1173, which is scheduled to expire in 2032. Corresponding patent applications are currently pending in Canada, Europe, Japan, China, South Korea, Brazil, Argentina and Venezuela, and patents stemming from these applications, if granted, would also expire in 2032.

Acute Kidney Injury

- We have obtained from the USPTO a patent covering the composition of matter of TH0673 which is scheduled to expire in 2031.

Melanotransferrin

- We have filed an International Patent Cooperation Treaty application relating to melanotransferrin-related peptides from which national patent applications were filed in the United States, Canada, Europe, Mexico, Brazil, South Korea, China and Japan. If such patents are granted, they would be scheduled to expire in 2032.

Our Trademarks & Other Intellectual Property

EGRIFTA[™] is our registered trademark in the United States and it is used in that country to commercialize tesamorelin for the reduction of excess abdominal fat in HIV-infected patients with lipodystrophy.

An application has been filed for the trademark *EGRIFTA Assist* in the United States and it is used to designate our call center that assists healthcare professionals and patients in processing statements of medical necessity and answering questions from both healthcare professionals and patients regarding *EGRIFTA*[™].

We have obtained registration for the name *EGRIFTA*[™] in many of the countries covered by the Sanofi Agreement and in many other countries worldwide. The use of the *EGRIFTA* trademark for tesamorelin intended for the reduction of excess abdominal fat in HIV-infected patients with lipodystrophy in the jurisdictions where we or our commercial partner intend to commercialize *EGRIFTA*[™] generally requires the approval of the regulatory authorities reviewing the marketing authorization application in such jurisdictions and the approval of the local intellectual property agency. In certain countries, such as in Canada, registration of a trademark may not occur until a declaration of use of the product for which a trademark is sought is filed with the appropriate intellectual property agency of such countries. A declaration of use can be filed once a product is approved for commercialization.

Other trademarks related to *EGRIFTA*[™] and tesamorelin have been filed as part of our business strategy. We have also reserved certain domain names in order to support future activities.

Our Policy on Intellectual Property

Our intellectual property practice is to keep all information relating to proprietary compounds, inventions, improvements, trade secrets, know-how and continuing technological innovation confidential and, where practicable, file patent and trademark applications. In particular, as part of our intellectual property protection practice, we:

- perform surveillance of third party patents and patent applications in order to identify any third party patent or third party patent application which, if granted, could be infringed by our activities;
- where practicable, file patent applications for any new and patentable invention, development or improvement in the United States and in other countries;
- prosecute all pending patent applications in conformity with applicable patent laws and in a manner that efficiently covers our activities;
- file trademark applications in countries of interest for our trademarks;
- register domain names in countries of interest; and
- maintain our intellectual property rights by paying government fees as may be necessary to ensure such rights remain in force.

Regulatory Exclusivity

The regulatory regimes of the United States and Canada may provide market exclusivity for a pharmaceutical product. Data protection and patent term extension for holders of patents provide a person with additional protection against third parties who may wish to commercialize a product similar to an approved product.

Data Protection

In the United States, the *Drug Price Competition and Patent Term Restoration Act of 1984*, also known as the *Hatch-Waxman Act*, awards, in certain circumstances, non-patent marketing exclusivities to pioneer drug manufacturers. The *Hatch-Waxman Act* provides five years of non-patent marketing exclusivity within the United States to an applicant who gains approval of a NDA for a “new chemical entity,” a drug for which the FDA has not previously approved any other new drug with the same active moiety, which is the molecule or ion responsible for the action of the drug. This marketing exclusivity generally prevents the FDA from approving, in certain circumstances, any abbreviated new drug application, or ANDA, for a generic drug or any 505(b)(2) NDA. Because tesamorelin qualifies as a “new chemical entity”, *EGRIFTA*[™] benefits from such regulatory exclusivity until November 2015.

An ANDA is a comprehensive submission that contains, among other things, data and information pertaining to the active pharmaceutical ingredient, drug product formulation, specifications, stability, analytical methods, manufacturing process validation data, quality control and bioequivalence. Rather than demonstrating safety and effectiveness, an ANDA applicant must demonstrate that its product is bioequivalent to an approved reference drug. ANDAs generally cannot be submitted for products that are not bioequivalent to the referenced drug or that are labelled for a use that is not approved for the reference drug.

When the FDA approves an NDA, it lists the approved drug in a publication entitled “Approved Drug Products with Therapeutic Equivalence Evaluations”, also known as the “Orange Book”. The FDA also lists patents identified by the NDA applicant as claiming the drug or an approved method of using the drug.

Any applicant who files an ANDA must certify to the FDA with regard to each relevant patent that (1) no patent information has been submitted to the FDA; (2) the patent has expired; (3) the listed patent has not expired, but will expire on a particular date and approval is sought after patent expiration; or (4) the patent is invalid or will not be infringed upon by the manufacture, use or sale of the drug product for which the ANDA is submitted. This last certification is known as a Paragraph IV certification. A notice of the Paragraph IV certification must be provided to each owner of the patent that is the subject of the certification and to the holder of the approved NDA to which the ANDA refers.

As mentioned above, generally, an ANDA may not be submitted prior to the expiry of the five year regulatory exclusivity period applicable to a drug product made of a “new chemical entity”. However, the submission of an ANDA with a Paragraph IV certification is permitted after four years, and if a patent infringement is brought by the patent owner within 45 days from receipt of the certification notice, the FDA is prevented from approving that ANDA until the earlier of 30 months from the receipt of the notice of the Paragraph IV certification, the expiration of the patent or such shorter or longer period as may be ordered by a court. An ANDA applicant that is sued for infringement may file a counterclaim to challenge the listing of the patent or information submitted to the FDA about the patent.

In Canada, the Food and Drug Regulations provides an eight year market exclusivity period to a NOC holder who markets an innovative drug in Canada.

Patent Term Extension

In the United States, the *Hatch-Waxman Act* permits patent term extension for one patent per approved drug of up to five years for patent term lost during product development and the FDA regulatory review process. However, patent term extension cannot extend the remaining patent term beyond a total of 14 years from the product's approval date. The patent term extension period is generally one-half the time between the effective date of an Investigational New Drug Application, or IND, and the submission date of an NDA plus the time between the submission date of an NDA and the NDA. We have obtained a five year patent term extension with respect to US patent 5,861,379 covering the composition of matter of tesamorelin.

In Canada, in the context of the Comprehensive Economic and Trade Agreement between Canada and Europe, there are talks of introducing a two year patent term extension period, under certain conditions, for patent term lost during Health Canada's regulatory review process. No decision has been made yet regarding the implementation of a patent term extension regulation for pharmaceutical companies filing NDS with Health Canada.

2.11 EMPLOYEES

As at November 30, 2014, we had 19 employees and, as at the date hereof, we have 18 employees. All of our employees are employed in Canada and engaged in administration, finance, regulatory and business development functions. None of our employees are unionized. We believe the relations with our employees are good.

Through inVentiv Health, we have an additional 21 persons dedicated to the commercialization of *EGRIFTA*[™] in the United States.

2.12 FACILITIES

We terminated our lease agreement at 2310 Alfred-Nobel Blvd, Montreal, Québec, on December 3, 2014. We currently carry out our activities at 2015 Peel Street, 5th Floor, in the City of Montreal, Québec, Canada. We lease a 7,496 square-foot office space. We no longer have laboratory facilities in our premises.

2.13 ENVIRONMENT

To our knowledge, environmental protection requirements do not have a significant financial or operational impact on our capital expenditures, income or competitive position within the normal course of our operating activities.

ITEM 3 RISK FACTORS

Before you invest in our common shares, you should understand the high degree of risk involved. You should consider carefully the following risks and uncertainties described below before you decide to purchase our common shares. The following risks may adversely impact our business, financial condition, operating results and prospects. Additional risks and uncertainties, including those that we do not know about or that we currently believe are immaterial, may also adversely affect our business, financial condition, operating results or prospects. As a result, the trading price of our common shares could decline and you could lose all or part of your investment.

3.1 RISKS RELATED TO THE COMMERCIALIZATION OF EGRIFTA™

Our commercial success and revenue growth depend solely on the commercialization of EGRIFTA™ in the United States; unsatisfactory future sales levels of EGRIFTA™ in the United States will have a material adverse effect on us.

Our ability to generate revenue and sustain growth is currently solely based on the commercialization of one product, EGRIFTA™, in the United States.

Our success in commercializing EGRIFTA™ in the United States will depend on our capacity:

- to implement and deploy a commercialization strategy that will be accepted by patients, healthcare professionals and third-party payors;
- to maintain reimbursement coverage for EGRIFTA™ by third-party payors;
- to maintain the registration of EGRIFTA™ on U.S. governmental forms as a drug available for purchase in the United States;
- to ensure that adequate supplies of EGRIFTA™ are available;
- to maintain conflict-free relationships with our principal third-party suppliers of services, namely our agent in the United States, inVentiv Health, our manufacturers, Bachem, and Jubilant, and our wholesalers, RxCrossroads, H. D. Smith, Cardinal, and McKesson;
- to defend our intellectual property rights against third-parties; and
- to comply with all laws and regulations in the United States that pertain to the commercialization of a pharmaceutical product.

Our success in commercializing EGRIFTA™ in the United States will also depend on:

- the capacity of inVentiv Health, in collaboration with us, to retain qualified, motivated and talented sales representatives and other key individuals instrumental in the commercialization of EGRIFTA™ in the United States; and
- the capacity of our third-party suppliers to comply with all laws and regulations applicable to the conduct of their respective businesses.

There can be no assurance that sales of EGRIFTA™ to customers in the United States will increase in the future. If sales of EGRIFTA™ to customers decrease, our revenue would be adversely affected which, in turn, could materially adversely affect our business, financial condition and operating results.

Because we expect to be dependent on revenues from *EGRIFTA*[™] for the foreseeable future, any negative developments relating to this product, such as safety or efficacy issues, manufacturing issues, the introduction or greater acceptance of competing products, or adverse regulatory or legislative developments, or our inability to implement or maintain any of the abovementioned factors, will have a material adverse effect on our business and our future business prospects.

We rely on third parties for the manufacture, distribution and commercialization of EGRIFTA[™] and such reliance may adversely affect our revenues, business and future business prospects if the third parties are unable or unwilling to fulfill their obligations.

We have a single third-party service provider for each of our core business activities pertaining to the commercialization of *EGRIFTA*[™], namely its manufacturing, its distribution and its commercialization. Any material issues such third-party service providers may encounter that relate to the provision of services to us would have a material adverse effect on our revenues, business and future business prospects since these third-party service providers may not be easily replaced.

We do not own or operate manufacturing facilities for the production of *EGRIFTA*[™], tesamorelin or any of our other compounds, nor do we have plans to develop our own manufacturing operations in the foreseeable future. We currently rely on Bachem and Jubilant to manufacture and supply all of our required raw materials, drug substance and drug product for our commercial sales and for the conduct of the Observational Study and the Retinopathy Study mandated by the FDA. Although potential alternative suppliers and manufacturers have been identified, we have not entered into any agreements with them nor have we qualified these vendors to date and no assurance can be given that such suppliers will be qualified in the future or receive necessary regulatory approvals. The replacement of a third-party manufacturer is time-consuming and costly due to the required validation of their capabilities. The validation process includes an assessment of the capacity of such third-party manufacturer to produce the quantities that we may request from time to time, the manufacturing process and its compliance with current good manufacturing practice, or GMP, regulations. In addition, the third-party manufacturer would have to familiarize itself with our technology. Validation of an additional third-party manufacturer takes at least twenty-four (24) months and could take as long as thirty-six (36) months or more.

We do not have state licensure in the United States to distribute *EGRIFTA*[™] and we do not currently intend to pursue applications to obtain the licenses required in order to distribute a drug product in every American state. Our supply chain model is based upon that fact and the distribution of *EGRIFTA*[™] in the United States is done through RxCrossroads which currently holds all state licensure required to distribute a drug product in every American state. We have not identified another third-party service provider that could replace RxCrossroads in the event that it becomes unable to distribute *EGRIFTA*[™]. The replacement of RxCrossroads would be time-consuming and might not be successful if we are unable to agree on the terms and conditions of a commercial agreement with another third-party service provider.

We do not employ sales or medical service liaison personnel in the United States in connection with the commercialization of *EGRIFTA*[™] in this territory. We rely on inVentiv Health to provide us with all of the services related to the commercialization of *EGRIFTA*[™], namely sales personnel, medical science liaison personnel, reimbursement specialists and other individuals whose roles and functions pertain to the commercialization of *EGRIFTA*[™]. In addition, we rely on inVentiv Health for the conduct of the Observational Study and the Retinopathy Study. Although we are aware that there exists other third-party services providers that could provide the same services as inVentiv Health, we have not entered into any agreements with them nor conducted any audit on them. If we need to find another third-party service provider for some or all of the services provided by inVentiv Health, it will be time-consuming and will be disruptive to our business. In addition, there can be no assurance that we will

be able to find such third-party service provider if we are unable to agree on the terms and conditions of an agreement with them.

Our reliance on one third-party service provider for each of our core business activities exposes us to a number of risks. For instance, we may be subject to delays in, or suspension of, the manufacturing of *EGRIFTA*[™] and tesamorelin if a third-party manufacturer:

- becomes unavailable to us for any reason, including as a result of the failure to comply with GMP regulations;
- experiences manufacturing problems or other operational failures, such as labour disputes, equipment failures or unplanned facility shutdowns required to comply with GMP, or damage from any event, including fire, flood, earthquake, business restructuring, labour disputes or insolvency; or
- fails to perform its contractual obligations under our agreement, such as failing to deliver the quantities requested on a timely basis or not meeting product specifications.

We may also be subject to distribution disruption and interrupted sales of *EGRIFTA*[™] in the United States if RxCrossroads:

- becomes unavailable to us for any reason, including as a result of its failure to meet applicable laws;
- experiences warehousing problems or other operational failure, such as unplanned facility shutdown or damage from any event, including fire, flood, earthquake, business restructuring or insolvency; or
- fails to perform its contractual obligations under our agreement.

We may be subject to a decrease in sales of *EGRIFTA*[™] in the United States or may face reimbursement challenges if inVentiv Health:

- becomes unavailable to us for any reason, including as a result of its incapacity to motivate and retain the employees working on the commercialization of *EGRIFTA*[™];
- experiences compliance issues with the FDA; or
- fails to perform its contractual obligations under our agreement.

Significant safety or drug interaction problems may arise with respect to *EGRIFTA*[™] which could result in restrictions in *EGRIFTA*[™]'s label, product recall or withdrawal of *EGRIFTA*[™] from the market, any of which would materially adversely impact our business and our future business prospects.

New safety or drug interaction issues may arise as *EGRIFTA*[™] is used over longer periods of time by a wider group of patients, some of whom may be taking numerous other medicines, or may suffer from additional underlying health problems. Such safety or drug interaction issues could include an increase in the severity or frequency of known problems or the discovery of previously unknown problems, and may result in a variety of adverse regulatory actions. Under U.S. laws, the FDA has broad authority over drug manufacturers to compel any number of actions if safety or drug interaction problems arise, including, but not limited to: (i) requiring manufacturers to conduct post-approval clinical studies to assess known risks or signals of serious risks, or to identify unexpected serious risks; (ii) mandating labeling changes to a product based on new safety information; or (iii) requiring manufacturers to implement a risk evaluation mitigation strategy where necessary to assure safe use of the drug. Similar laws and regulations exist in countries outside of the United States. Previously unknown safety or drug interaction problems could also result in product recalls, restrictions on the product's permissible uses, or withdrawal of the product from the United States market and/or a

rejection of the pending marketing authorization applications in other countries. If new safety or drug interactions issues are discovered, sales of *EGRIFTA*[™] may decrease resulting in a material adverse effect on our business, financial condition and operating results.

Our levels of revenues are highly dependent on obtaining patient reimbursement for EGRIFTA[™].

Market acceptance and sales of *EGRIFTA*[™] substantially depend on the availability of reimbursement from third-party payors such as governmental authorities, including U.S. Medicare and Medicaid, managed care providers, and private insurance plans and may be affected by healthcare reform measures in the United States and elsewhere. Third-party payors decide which medications they will pay for and establish reimbursement levels. A primary trend in the U.S. healthcare industry and elsewhere is cost containment. Government authorities and these third-party payors are attempting to control costs by limiting coverage and the amount of reimbursement for particular medications. Increasingly, third-party payors have been challenging the prices charged for products. Third-party payors may decrease the level of reimbursement of a product or cease such reimbursement and the occurrence of any of these events could materially adversely affect the sales of *EGRIFTA*[™].

Sales of *EGRIFTA*[™] to patients benefitting from U.S. funded reimbursement programs represents an important part of all sales of *EGRIFTA*[™]. Denial of coverage for *EGRIFTA*[™] under any of the current programs, or delays in obtaining coverage for *EGRIFTA*[™] under any of these programs, would materially adversely affect our revenues.

In addition, we cannot be sure that reimbursement by insurers, government or others will be available for *EGRIFTA*[™] in other territories. If reimbursement is not available, sales of *EGRIFTA*[™] may be adversely affected. Sales of *EGRIFTA*[™] may also be adversely affected if reimbursement is available to a limited number of patients. Under the Sanofi Agreement, sanofi is responsible for seeking reimbursement of *EGRIFTA*[™] in each country where marketing authorization will be obtained and, as a result, we have no control over whether, or what level of, reimbursement is achieved. If reimbursement is not available or is available only in a limited manner, the commercialization of *EGRIFTA*[™] may not be successful and this could have a material adverse effect on our revenues and future prospects.

Even though EGRIFTA[™] is approved for sale in the United States, revenue that we generate from its sales may be limited.

Sales of *EGRIFTA*[™] or any future products for which we obtain marketing approval from the FDA or other regulatory authorities will depend upon the acceptance of such product by the medical community, including physicians, patients and third-party payors. The degree of market acceptance of any of our products will depend on a number of factors, including:

- demonstrated product safety, including the prevalence and severity of side effects, and effectiveness as a treatment that addresses a significant unmet medical need;
- storage requirements, dosing regimen and ease of administration;
- the availability of competitive alternatives;
- our ability to obtain and maintain sufficient third-party coverage for reimbursement from government health care programs, including U.S. Medicare and Medicaid, private health insurers and other third-party payors;
- the willingness and ability of patients to pay out-of-pocket for medications in the absence of third-party coverage;

- the product price; and
- the effectiveness of sales and marketing efforts.

If *EGRIFTA*[™] does not achieve adequate sales, we may not generate sufficient revenue from this product to become profitable. Moreover, if we do not generate sufficient revenue from the sale of *EGRIFTA*[™], we may default on our payment obligations under the EMD Serono Termination Agreement and EMD Serono could exercise its rights under its security interest over all of our tesamorelin-related assets.

Our ability to grow our revenues from sales of EGRIFTA[™] in countries outside of the United States will be limited if we, sanofi or any other potential commercial partner do not obtain market approval and reimbursement coverage or experience significant delays in the efforts to obtain market approval and reimbursement coverage for EGRIFTA[™]. Even if approval is obtained, it may take many months before the commercialization of EGRIFTA[™] occurs since amended filings will be required in certain territories to reflect the use of the then-current presentation of EGRIFTA[™]

In order for *EGRIFTA*[™] to be commercialized outside of the United States, it is necessary to obtain regulatory approval from the appropriate regulatory authorities. The regulatory authority of each country has its own rules and regulations and the requirements and timing for regulatory approval vary widely from country to country and may, in some cases, be different or more rigorous, than requirements in the United States.

Sanofi, our commercial partner in Latin America, Africa and the Middle East, has filed marketing authorization applications for *EGRIFTA*[™] in Brazil and Mexico and those are still pending. In those two most important markets in Latin America, marketing authorization applications have been filed for more than three (3) years. The regulatory authority in Israel has rejected the marketing authorization application filed by sanofi and sanofi is currently assessing whether it will appeal the decision or not.

The marketing authorization application filed by sanofi in Brazil and Mexico are based on the commercialization of *EGRIFTA*[™] in a 2 mg/vial presentation. As of this date, we no longer commercialize *EGRIFTA*[™] in such presentation but rather in a 1 mg/vial presentation. Even if we obtain approval for the commercialization of *EGRIFTA*[™] in the 2 mg/vial presentation in Brazil and Mexico, sanofi will need to resubmit a new marketing authorization application in each of those countries for the commercialization of *EGRIFTA*[™] in the then-current 1 mg/vial presentation. Resubmitting a revised marketing authorization application could be the equivalent of submitting an initial marketing authorization application and it may take many months before sanofi is able to commercialize *EGRIFTA*[™] in those countries. If we do not obtain approval of *EGRIFTA*[™] in Brazil and Mexico or if there are additional delays in obtaining approval, our potential revenue growth could be adversely affected. Revenue growth may also be affected if sanofi does not obtain reimbursement coverage for *EGRIFTA*[™] or if sanofi decides not to file a marketing authorization application in countries where they believe that it will not be commercially viable to sell *EGRIFTA*[™].

In Canada, we are awaiting a decision from Health Canada following the filing of a SNDS in August 2014 to commercialize *EGRIFTA*[™] in a 1 mg/vial presentation. There can be no assurance that Health Canada will approve our SNDS. If Health Canada does not approve our SNDS, we will not be able to commercialize *EGRIFTA*[™] in Canada and our capacity to grow our revenues will be affected. Revenue growth may also be affected if we are unable to obtain reimbursement coverage for *EGRIFTA*[™] in Canada.

In Europe, we have consulted with key physicians, patient groups, and regulatory experts and subsequently met with regulators in certain jurisdictions to evaluate our prospects for acceptance

should we decide to re-file for approval. The result of these consultations and meetings led us to believe that we do not have a reasonable likelihood of being approved in Europe without including additional clinical data on *EGRIFTA*[™]. Therefore, we are actively seeking a commercial partner to distribute *EGRIFTA*[™] through named patient sales programs and to pursue marketing authorizations on a country-by-country basis. There is no assurance that we will be able to find a qualified commercial partner and, if we do, that the negotiation that will take place between us and such potential commercial partner will result in an agreement between us. If we are unable to find a commercial partner, we may forego the opportunity to distribute *EGRIFTA*[™] in Europe and it could have an adverse effect on our revenue growth, operating results and business prospects.

In addition, even if *EGRIFTA*[™] is approved in all or some of the countries where marketing authorization applications are filed, or are intended to be filed, there is no assurance that *EGRIFTA*[™] will be successfully commercialized in any of those countries.

The overall commercialization success of *EGRIFTA*[™] outside the United States will depend on several factors, including:

- receipt of regulatory approvals for *EGRIFTA*[™] from regulatory agencies in the territories in which we wish to expand the commercialization of *EGRIFTA*[™];
- market acceptance of *EGRIFTA*[™] by the medical community, patients and third-party payors;
- the amount of resources devoted by ourselves, sanofi and any other potential commercial partner, and their local agents in certain countries, to commercialize *EGRIFTA*[™] in those countries;
- maintaining manufacturing and supply agreements to ensure the availability of commercial quantities of *EGRIFTA*[™] through validated processes;
- the number of competitors in these other markets; and
- protecting and enforcing our intellectual property and avoiding patent infringement claims.

The non-approval or lack of commercial success of *EGRIFTA*[™] in major markets outside the United States would decrease our capacity to grow revenues and could affect our operating results.

We are dependent on a collaboration and licensing agreement for the commercialization of EGRIFTA[™] in Latin America, Africa and the Middle East. This agreement places the commercialization of EGRIFTA[™] in these markets outside of our control.

Although our collaboration and licensing agreement with sanofi contains provisions governing its responsibilities as a partner for the commercialization of *EGRIFTA*[™] in these territories, our dependence on sanofi to commercialize *EGRIFTA*[™] is subject to a number of risks, including:

- our limited control of the amount and timing of resources that it will be devoting to the commercialization, marketing and distribution of *EGRIFTA*[™], including obtaining third-party patient reimbursement coverage, which could adversely affect our ability to obtain or maximize revenues;
- disputes or litigation that may arise between us and sanofi, which could adversely affect the commercialization of *EGRIFTA*[™], all of which would divert our management's attention and our resources;
- sanofi not properly defending our intellectual property rights or using them in such a

way as to expose us to potential litigation, which could, in both cases, adversely affect the value of our intellectual property rights;

- corporate reorganizations or changes in business strategies of sanofi, which could adversely affect its willingness or ability to fulfill its obligations under its agreement; and
- sanofi being found in breach of local laws.

Our collaboration and licensing agreement may be terminated by sanofi in the event of a breach by us of our obligations under such agreement, including our obligation to supply *EGRIFTA*[™], for which we rely on third parties. If sanofi terminates its agreement with us or fails to effectively commercialize *EGRIFTA*[™], for any of the foregoing or other reasons, we may not be able to replace sanofi in those markets and the occurrence of any of the abovementioned events would affect our operating results.

We face competition and the development of new products by other companies could materially adversely affect our business and operating results.

The biopharmaceutical and pharmaceutical industries are highly competitive and we must compete with pharmaceutical companies, biotechnology companies, academic and research institutions as well as governmental agencies for the development and commercialization of products, most of which have substantially greater financial, technical and personnel resources than us. Although we believe that we have currently no direct competitors with an approved product indicated for the reduction of excess abdominal fat in HIV-infected patients with lipodystrophy, new competitive products could come on the market and we could face indirect competition from other companies developing and/or commercializing metabolic products and/or other products that reduce or eliminate the occurrence of excess abdominal fat. In addition, a company could file an ANDA with the FDA with the aim of selling and marketing a generic version of *EGRIFTA*[™].

3.2 RISKS RELATED TO RESEARCH AND DEVELOPMENT ACTIVITIES

In connection with its approval of *EGRIFTA*[™], the FDA has required the Observational Study and the Retinopathy Study.

The Observational Study is to evaluate the safety of long-term administration of *EGRIFTA*[™] and the Retinopathy Study is to assess whether *EGRIFTA*[™] increases the incidence or progression of diabetic retinopathy in diabetic HIV-infected patients with lipodystrophy and excess abdominal fat. Both studies are currently recruiting patients and since May 1, 2014, we have assumed responsibility for completing these studies. There can be no assurance that the two studies will be successfully completed or that the results of the studies will be positive. In the event that the studies are not completed or that the results are unfavorable, the FDA could prohibit the future sale, or put restrictions on future sale of *EGRIFTA*[™] in the United States, either of which would have a material adverse effect on our business, financial condition and operating results.

We rely on third-party service providers to conduct the Observational Study and the Retinopathy Study for *EGRIFTA*[™] as well as our preclinical studies and clinical trials if the research and development activities related to our compounds are resumed. The failure by any of these third parties to comply with their obligations may delay the studies which could have an adverse effect on our research and development programs.

We have limited human resources to conduct preclinical studies and clinical trials particularly in light of our past restructurings and will have to rely on third-party service providers to conduct our studies and trials and carry out certain data gathering and analyses in the future. inVentiv Health has been retained to conduct the Observational Study and the Retinopathy Study mandated by the FDA. The preclinical, or non-clinical, studies must be conducted in compliance with good laboratory practice, or

GLP, regulations. Clinical trials must comply with good clinical practice, or GCP, requirements, which are ethical and scientific quality standards for conducting, recording and reporting clinical trials to assure the integrity of study data and that the rights, safety and well being of trial participants are protected. If our third-party service providers become unavailable for any reason, including as a result of the failure to comply with the rules and regulations governing the conduct of preclinical studies and clinical trials, operational failures such as equipment failures or unplanned facility shutdowns, or damage from any event such as fire, flood, earthquake, business restructuring, labour dispute or insolvency or, if they fail to perform their contractual obligations pursuant to the terms of our agreements with them, such as failing to perform the testing, compute the data or complete the reports further to the testing, we may incur delays which may be significant in connection with our post-approval commitments with the FDA for *EGRIFTA*[™] and/or the planned timing of our trials and studies which could adversely affect the timing of the development program of a compound or the filing of an application seeking marketing approval in a jurisdiction where we rely on third-party service providers to make such filing. In addition, where we rely on such third-party service provider to help in answering any questions raised by a regulatory agency during its review of one of our applications, the unavailability of such third-party service provider may adversely affect the timing of the review of an application and could ultimately delay the approval. If the damages to any of our third-party service providers are material, or, for any reason, such providers do not operate in compliance with GLP or GCP regulations or are unable or refuse to perform their contractual obligations, we would need to find alternative third-party service providers.

If we needed to change or select new third-party service providers, the planned working schedule related to preclinical studies and/or clinical trials could be delayed since the number of competent and reliable third-party service providers of preclinical and clinical work in compliance with GLP and GCP regulations is limited. In addition, if we needed to change or select new third-party service providers to carry out work in response to a regulatory agency review of one of our applications, there may be delays in responding to such regulatory agency which, in turn, may lead to delays in commercializing a product candidate.

Any selection of new third-party service providers to carry out work related to preclinical studies and clinical trials would be time-consuming and would result in additional delays in receiving data, analysis and reports from such third-party service providers which, in turn, would delay the filing of documents with the FDA in connection with the Observational Study and the Retinopathy Study. These delays could also postpone the filing of any NDA, or its equivalent, with FDA or comparable regulatory agencies for the purposes of obtaining regulatory approval to commercialize our product candidates. Furthermore, such delays could increase our expenditures to develop a compound and materially adversely affect our business, financial condition and operating results.

The conduct of clinical trials requires the enrolment of patients and difficulties in enrolling patients could delay the conduct of our clinical trials or result in their non-completion.

The conduct of clinical trials requires the enrolment of patients. We may have difficulties enrolling patients for the conduct of the Observational Study and the Retinopathy Study mandated by the FDA or our future clinical trials as a result of design protocol, the size of the patient population, the eligibility criteria to participate in the clinical trials, the availability of competing therapies, the patient referral practices of physicians and the availability of clinical trial sites. Difficulty in enrolling patients for our clinical trials could result in the cancellation of clinical trials or delays in completing them. Once patients are enrolled in a clinical trial, the occurrence of any adverse drug effects or side effects observed during the trial could result in the clinical trial being cancelled. Any of these events would have material adverse consequences on the timely development of our compounds, the filing of an NDA, or its equivalent, with FDA or comparable regulatory agencies and the commercialization of such compounds. Moreover, if we are unable to complete the Observational Study and the

Retinopathy Study within the time mandated by the FDA because we have difficulties enrolling patients for these studies, the FDA could withdraw *EGRIFTA*[™] from the market. Under these circumstances, our revenues and operating results would be materially adversely affected and we could be in default under our payment obligations to EMD Serono.

We have suspended all significant research and development activities related to our compounds, including TH1173, and the discovery of new peptides until we have sufficient funds to invest in our research and development programs. We may never resume these activities, which could materially adversely affect our long-term growth and could cause us to rely solely on EGRIFTA[™] as a revenue-generating asset indefinitely.

Our portfolio of compounds is very limited and these compounds are at early stages of development. As a result of business plan revisions announced in October 2012, we put on hold the launch of the Phase I clinical program for TH1173 and suspended all significant long-term research and development activities on our compounds and the discovery of new peptides. There is no assurance that we will resume these activities and our long-term growth could be materially adversely affected.

In addition, even if we resume research and development of our compounds, there can be no assurance that these compounds will reach the clinical trial phase, obtain positive results in clinical trials, obtain regulatory approval or, if approved, be successfully commercialized.

3.3 RISKS RELATED TO OUR INTELLECTUAL PROPERTY

Our failure to protect our intellectual property may have a material adverse effect on our ability to develop and commercialize our products.

We will be able to protect our intellectual property rights from unauthorized use by third parties only to the extent that our intellectual property rights are covered and protected by valid and enforceable patents, trademarks and copyrights or are effectively maintained as trade secrets. We try to protect our intellectual property position by, among other things, filing patent applications and trademark applications related to our proprietary technologies, inventions, improvements and tradenames that are important to the development of our business.

Because the patent and trademark position of pharmaceutical companies involves complex legal and factual questions, the issuance, scope, validity, and enforceability of patents and trademarks cannot be predicted with certainty. Patents and trademarks, if issued, may be challenged, invalidated or circumvented. For example, if our patents are invalidated or found to be unenforceable, we would lose the ability to exclude others from making, using or selling the inventions claimed. Moreover, an issued patent does not guarantee us the right to use the patented technology or commercialize a product using that technology. Third parties may have blocking patents that could be used to prevent us from developing our compounds, selling our products or commercializing our patented technology. Thus, patents that we own may not allow us to exploit the rights conferred by our intellectual property protection.

Our pending patent applications may not be issued or granted as patents. Even if issued, they may not be issued with claims of sufficient breadth to protect our product candidates and technologies or may not provide us with a competitive advantage against competitors with similar products or technologies. Furthermore, others may independently develop products or technologies similar to those that we have developed or may reverse engineer or discover our trade secrets through proper means. In addition, the laws of many countries do not protect intellectual property rights to the same extent as the laws of Canada, the United States and the European Patent Convention, and those countries may also lack adequate rules and procedures for defending intellectual property rights

effectively. In Brazil, where we were granted a patent covering the composition of matter for tesamorelin that is currently set to expire in 2019, we became aware that the validity of all Brazilian pharmaceutical-related patents having a term in excess of 20 years from the filing date are judicially challenged in the Brazilian courts by the *Instituto Nacional da Propriedade Industrial*, or INPI, the Brazilian patent office. INPI alleges that all pharmaceutical-related patents granted by INPI that were filed between 1995 and 1997 and that were granted a term in excess of 20 years from the filing date are either invalid or that their terms should be reduced to 20 years from the filing date. The Brazilian courts ruled against the arguments of INPI and INPI has appealed the case. The case was scheduled to be heard in October 2014 but the hearing was suspended following the filing of a brief by an association of generic pharmaceutical companies seeking to support the arguments of INPI. There has been no development since the suspension of the hearing. If INPI succeeds in its arguments, we may lose our patent protection on tesamorelin, or we may have a reduction of our patent term from 2019 to 2016.

Although we have received patents from the USPTO for the treatment of HIV-related lipodystrophy with tesamorelin, there can be no guarantee that, in the other countries where we filed patent applications for the treatment of HIV-related lipodystrophy, we will receive a patent or obtain granted claims of similar breadth to those granted by the USPTO.

We also rely on trade secrets, know-how and technology, which are not protected by patents, to maintain our competitive position. We try to protect this information by entering into confidentiality agreements with parties who have access to such confidential information, such as our current and prospective suppliers, distributors, manufacturers, commercial partners, employees and consultants. Any of these parties may breach the agreements and disclose confidential information to our competitors. It is possible that a competitor will make use of such information, and that our competitive position could be disadvantaged.

Enforcing a claim that a third party infringes on, has illegally obtained or is using an intellectual property right, including a trade secret or know-how, is expensive and time-consuming and the outcome is unpredictable. In addition, enforcing such a claim could divert management's attention from our business. If any intellectual property right were to be infringed, disclosed to or independently developed by a competitor, our competitive position could be harmed. Any adverse outcome of such litigation or settlement of such a dispute could subject us to significant liabilities, could put one or more of our pending patent applications at risk of being invalidated or interpreted narrowly, could put one or more of our patents at risk of not issuing, or could facilitate the entry of generic products.

Furthermore, because of the substantial amount of discovery required in connection with intellectual property litigation, there is a risk that some of our confidential information could be compromised by disclosure during this type of litigation. For example, confidential information may be disclosed, inadvertently or as ordered by the court, in the form of documents or testimony in connection with discovery requests, depositions or trial testimony. This disclosure would provide our competitors with access to our proprietary information and may harm our competitive position.

Our commercial success depends, in part, on our ability not to infringe on third party patents and other intellectual property rights.

Our capacity to commercialize our product candidates, and more particularly *EGRIFTA*[™], will depend, in part, upon our ability to avoid infringing third party patents and other third-party intellectual property rights. The biopharmaceutical and pharmaceutical industries have produced a multitude of patents and it is not always easy for participants, including us, to determine which patents cover various types of products, processes of manufacture or methods of use. The scope and breadth of patents is subject to interpretation by the courts and such interpretation may vary depending on the

jurisdiction where the claim is filed and the court where such claim is litigated. The fact that we own patents for tesamorelin and for the treatment of HIV-related lipodystrophy in certain jurisdictions does not guarantee that we are not infringing one or more third-party patents in such jurisdictions and there can be no guarantee that we will not infringe or violate third-party patents and other third-party intellectual property rights in the United States or other jurisdictions.

For example, EMD Serono has listed a patent held by one of its affiliates in the Orange Book under the *Hatch-Waxman Act* with respect to *EGRIFTA*[™] in HIV-associated lipodystrophy. With the termination of the EMD Serono Agreement, EMD Serono could assert that such patent would be infringed by our continued sale of *EGRIFTA*[™] in the United States. To counter that risk, we have obtained a non-exclusive license from EMD Serono's affiliate under the EMD Serono Termination Agreement in order to continue selling *EGRIFTA*[™] in the United States. If we are in default under the EMD Serono Termination Agreement and such default is not cured within the agreed upon time, EMD Serono's affiliate could terminate our non-exclusive license. The termination of that license could prevent us from selling *EGRIFTA*[™] in the United States if we were found to infringe the patent listed by one of EMD Serono's affiliates in the Orange Book and this could have a material adverse effect on our business, financial condition and operating results.

Patent analysis for non-infringement is based in part on a review of publicly available databases. Although we review from time to time certain databases to conduct patent searches, we do not have access to all databases. It is also possible that we will not have reviewed some of the information contained in the databases or we found it to be irrelevant at the time we conducted the searches. In addition, because patents take years to issue, there may be currently pending applications that have not yet been published or that we are unaware of, which may issue later as patents. As a result, there can be no guarantee that we will not violate third-party patents.

Because of the difficulty in analyzing and interpreting patents, there can be no guarantee that a third party will not assert that we infringe such third-party's patents or any of its other intellectual property rights. Under such circumstances, there is no guarantee that we would not become involved in litigation. Litigation with any third party, even if the allegations are without merit, is expensive, time-consuming and would divert management's attention from the daily execution of our business plan. Litigation implies that a portion of our financial assets would be used to sustain the costs of litigation instead of being allocated to further the development of our business.

If we are involved in patent infringement litigation, we would need to prevail in demonstrating that our products do not infringe the asserted patent claims of the relevant patent, that the patent claims are invalid or that the patent is unenforceable. If we are found to infringe a third-party patent or other intellectual property right, we could be required to enter into royalty or licensing agreements on terms and conditions that may not be favorable to us, and/or pay damages, including up to treble damages in the United States (for example, if found liable of wilful infringement) and/or cease the development and commercialization of our product candidates. Even if we were able to obtain a license, the rights may be non-exclusive, which could result in our competitors gaining access to the same intellectual property and to compete with us.

We have not been served with any notice alleging that we infringe a third-party patent, but there may be issued patents that we are unaware of that our products may infringe, or patents that we believe we do not infringe but ultimately could be found to infringe. If we were to challenge the validity of a competitor's issued United States patent in a United States court, we would need to overcome a statutory presumption of validity that attaches to every United States patent. This means that, in order to prevail, we would have to present clear and convincing evidence as to the invalidity of the patent's claims. We cannot guarantee that a court would find in our favour on questions of infringement and validity. Any finding that we infringe or violate a third-party patent or other intellectual property right

could materially adversely affect our business, financial condition and operating results

3.4 REGULATORY RISKS

We may be subject to enforcement action if we engage in the off-label promotion of EGRIFTA™.

Our promotional materials and training methods must comply with the *Federal Food, Drug and Cosmetic Act*, as amended, of the United States, or FFDCA, and other applicable laws and regulations, including restraints and prohibitions on the promotion of off-label, or unapproved, use. Physicians may prescribe *EGRIFTA™* for off-label use without regard to these prohibitions, as the FFDCA does not restrict or regulate a physician's choice of treatment within the practice of medicine. However, if the FDA determines that our promotional materials or training of company employees or agents constitutes promotion of an off-label use, it could request that we modify our training or promotional materials, issue corrective action, or subject us to regulatory or enforcement actions, including but not limited to the issuance of an untitled letter or warning letter, and a judicial action seeking injunction, product seizure and civil or criminal penalties. It is also possible that other federal, state or non-U.S. enforcement authorities might take action if they consider our promotional or training materials to constitute promotion of an unapproved use, which could result in significant fines or penalties under other statutory authorities, such as laws prohibiting false claims for reimbursement. Our reputation would also be damaged. Although our policy is to refrain from written or oral statements that could be considered off-label promotion of *EGRIFTA™*, the FDA or another regulatory agency could disagree and conclude that we have engaged in off-label promotion. In addition, the off-label use of *EGRIFTA™* may increase the risk of product liability claims. Product liability claims are expensive to defend and could divert our management's attention, result in substantial damage awards against us and harm our reputation.

The pharmaceutical industry is highly regulated and pharmaceutical companies are subject to various federal and state fraud and abuse laws, including, without limitation, the federal Anti-Kickback Statute and the federal False Claims Act.

Healthcare fraud and abuse regulations are complex, and even minor irregularities can potentially give rise to claims that a statute or prohibition has been violated. The laws that may affect our ability to operate include:

- the federal healthcare program's anti-kickback law, which prohibits, among other things, persons from knowingly and willfully soliciting, receiving, offering or paying remuneration, directly or indirectly, in exchange for or to induce or reward either the referral of an individual for, or the purchase, order or recommendation of, any good or service for which payment may be made under federal healthcare programs such as the Medicare and Medicaid programs;
- federal false claims laws which prohibit, among other things, individuals or entities from knowingly presenting, or causing to be presented, claims for payment from Medicare, Medicaid, or other third-party payers that are false or fraudulent;
- the federal Health Insurance Portability and Accountability Act of 1996, which created federal criminal laws that prohibit executing a scheme to defraud any healthcare benefit program or making false statements relating to healthcare matters;
- the FFDCA and similar laws regulating advertisement and labeling; and
- Non-U.S. and U.S. state law equivalents of each of the above federal laws, such as anti-kickback and false claims laws which may apply to items or services reimbursed by

any third-party payer, including commercial insurers.

The federal anti-kickback law has been interpreted to apply to arrangements between pharmaceutical manufacturers on the one hand and prescribers, purchasers or formulary managers on the other. Although there are several statutory exemptions and regulatory safe harbors protecting certain common activities from prosecution, the exemptions and safe harbors are drawn narrowly, and practices that involve remuneration intended to induce or reward prescribing, purchasing or recommending may be subject to scrutiny if they do not qualify for an exemption or safe harbor. Most American States also have statutes or regulations similar to the federal anti-kickback law and federal false claims laws, which apply to items and services covered by Medicaid and other state programs, or, in several states, apply regardless of the payer. Administrative, civil and criminal sanctions may be imposed under these federal and state laws. Further, the Health Care Reform Law, among other things, amends the intent requirement of the federal anti-kickback and criminal healthcare fraud statutes. A person or entity can now be found guilty under the federal anti-kickback law without actual knowledge of the statute or specific intent to violate it. In addition, the Health Care Reform Law provides that the government may assert that a claim including items or services resulting from a violation of the federal anti-kickback statute constitutes a false or fraudulent claim for purposes of the false claims statutes. Possible sanctions for violation of these anti-kickback laws include monetary fines, civil and criminal penalties, exclusion from Medicare and Medicaid programs and forfeiture of amounts collected in violation of such prohibitions. Any violations of these laws, or any action against us for violation of these laws, even if we successfully defend against it, could result in a material adverse effect on our reputation, business, financial condition and operating results.

To enforce compliance with the federal laws, the U.S. Department of Justice, or DOJ, scrutinizes interactions between healthcare companies and healthcare providers, which has led to a number of investigations, prosecutions, convictions and settlements in the healthcare industry. Dealing with investigations can be time and resource consuming and can divert management's attention from the business. Additionally, if a healthcare provider settles an investigation with the DOJ or other law enforcement agencies, we may be forced to agree to additional onerous compliance and reporting requirements as part of a consent decree or corporate integrity agreement. Any such investigation or settlement could increase our costs or otherwise have an adverse effect on our business. Over the past few years, a number of pharmaceutical and other healthcare companies have been prosecuted under these laws for a variety of promotional and marketing activities, such as: providing free trips or items and gifts of value to prescribers, "sham" consulting fees and grants and other monetary benefits to prescribers; reporting inflated average wholesale prices that were then used by federal programs to set reimbursement rates; engaging in off-label promotion; and submitting inflated best price information to the Medicaid Rebate Program to reduce liability for Medicaid rebates.

In addition, there has been a recent trend of increased federal and state regulation of payments made to physicians for marketing. Some states, such as California, Massachusetts and Vermont, mandate implementation of commercial compliance programs, along with the tracking and reporting of gifts, compensation and other remuneration to certain healthcare professionals. The shifting commercial compliance environment and the need to build and maintain robust and expandable systems to comply with different compliance and/or reporting requirements in multiple jurisdictions increase the possibility that a healthcare company may run afoul of one or more of the requirements.

If our activities are found to be in violation of these laws or any other federal and state fraud and abuse laws, we may be subject to penalties, including civil and criminal penalties, damages, fines and the curtailment or restructuring of our activities with regard to the commercialization of *EGRIFTA*[™], which could harm the commercial success of *EGRIFTA*[™] and materially affect our business, financial condition and results of operations. We cannot guarantee that we will be able to mitigate all operational risks. In addition, we cannot guarantee that we, our employees, our consultants or our

contractors are or will be in compliance with all potentially applicable U.S. federal and state regulations and/or laws. Because of the far-reaching nature of these laws, we may be required to alter or discontinue one or more of our business practices to be in compliance with these laws. If we fail to adequately mitigate our operational risks or if we or our agents fail to comply with any of those regulations, laws and/or requirements, a range of actions could result, including, but not limited to, the termination of clinical trials, the failure to approve a product candidate, restrictions on *EGRIFTA*[™] or manufacturing processes, withdrawal of *EGRIFTA*[™] from the market, significant fines, exclusion from government healthcare programs or other sanctions or litigation. Such occurrences could have a material and adverse effect on our product sales, business and results of operations.

The scope and enforcement of these laws is uncertain and subject to rapid change in the current environment of healthcare reform. Federal or state regulatory authorities might challenge our current or future activities under these laws. Any such challenge could have a material adverse effect on our reputation, business, results of operations and financial condition. Any state or federal regulatory review of us or the third parties with whom we contract, regardless of the outcome, would be costly and time-consuming.

3.5 LITIGATION RISKS

An adverse determination, if any, in the securities class action lawsuit currently pending against us, or any other future lawsuits in which we are a defendant, could have a material adverse effect on us.

A motion to authorize the institution of a class action was originally filed in July 2010 in the Superior Court of Québec, District of Montreal, entitled 121851 Canada Inc. v. Theratechnologies Inc. et al., Number 500-06-000-515-102. The complaint alleged that the Company, a director and a former executive officer violated the secondary market liability provisions of the *Securities Act* (Québec) by failing to disclose a material change relating to the administration of *EGRIFTA*[™]. The plaintiff sought damages on behalf of a class of persons who were shareholders at May 21, 2010 and who sold their common shares on May 25 or 26, 2010. On February 24, 2012, the Superior Court of Québec authorized 121851 Canada Inc. to institute a class action against us, a director and a former executive officer. On March 20, 2012, we filed a motion seeking permission to appeal this judgment with the Court of Appeal of Québec, District of Montreal, Number 500-09-022519-128, and the hearing took place on January 24, 2013. On July 17, 2013, the Court of Appeal of Québec dismissed our motion to dismiss the authorization to institute such class action and confirmed the decision of the Superior Court of Québec. On November 6, 2013, we filed a motion with the Supreme Court of Canada seeking permission to appeal the decision issued by the Court of Appeal of Québec. Such motion was granted by the Supreme Court of Canada on February 20, 2014 and the hearing occurred on December 1, 2014. No decision has been issued yet.

In May 2013, the same plaintiff instituted a second class action based on the same facts and seeking the same conclusion as the first motion except that damages are sought under the *Civil Code of Québec* instead of the *Securities Act* (Québec). The differences between the claim made under the *Securities Act* (Québec) and the *Civil Code of Québec* rest on the type of evidence the plaintiff will need to show the court to prove its claim and the value of the damages that may be awarded to the plaintiff if it is successful in its allegations against the Company, a director and a former executive officer. Under the *Securities Act* (Québec), the plaintiff does not have to demonstrate causation between an alleged breach of the provisions of the *Securities Act* (Québec) and the damages incurred, if any, but the amount of damages that may be sought is limited by laws. Damages that may be claimed under the *Civil Code of Québec* are not limited, but the plaintiff has to demonstrate that there is causation between the alleged breach of an obligation and the damages sought. The parties have agreed to stay this motion until a final decision is issued under the first motion.

Whether or not the plaintiff's claims are successful, this type of litigation is often expensive and diverts management's attention and resources, which could adversely affect our business, financial condition and operating results. We may also be the target of similar litigation in the future. Any future litigation could result in substantial costs and divert our management's attention and resources, which could cause serious harm to our business, operating results and financial condition. We maintain liability insurance. However, if any costs or expenses (including the award of damages, if any) associated with this or any other litigation exceed our insurance coverage, we may be forced to bear some or all of these costs and expenses directly, which could be substantial and could have a material adverse effect on our available funds and operating results.

If we fail to comply with our contractual obligations, undertakings and covenants under our agreements with our commercial partner and third-party service providers, we may be exposed to claims for damages and/or termination of these agreements, all of which could materially adversely affect the commercialization of EGRIFTA™, our capacity to generate revenues and management's attention to the development of our business.

We rely on sanofi to commercialize and to obtain and maintain regulatory approvals of EGRIFTA™ in the territories covered under our distribution and licensing agreement with it. We also rely on third-party service providers for sales, marketing and distribution activities in the United States and to manufacture EGRIFTA™ for commercialization and tesamorelin for our clinical trials. Under those agreements, we have assumed certain obligations, undertakings and covenants which, if breached by us and not remedied within the agreed upon periods, could expose us to claims for damages and/or termination of these agreements. If we are unable to meet our obligations under any of our agreements with sanofi and third-party service providers which results in termination of such agreements, this will materially adversely affect our business, financial condition and operating results since we rely on one commercial partner and single third-party service providers, each of whom performing key services for the success of our business plan. In addition, under the terms of the EMD Serono Termination Agreement, we have granted EMD Serono a security interest over all of our tesamorelin-related assets. If we are in breach of the EMD Serono Termination Agreement by failing to meet our payment obligations to EMD Serono, EMD Serono has the right to seize all of those tesamorelin-related assets. Unless we are able to generate sufficient revenues from EGRIFTA™ or other assets, a breach of the payment provisions under the EMD Serono Termination Agreement by us will have a material adverse effect on our business and could lead to recourses under insolvency laws.

If product liability lawsuits are brought against us, they could result in costly and time-consuming litigation and significant liabilities.

Despite all reasonable efforts to ensure the safety of EGRIFTA™ and our other product candidates, it is possible that we or sanofi will sell products which are defective, to which patients react in an unexpected manner, or which are alleged to have side effects. The development, manufacture and sale of such products may expose us to potential liability, and the pharmaceutical industry has been subject to significant product liability litigation. Any claims, with or without merit, could result in costly litigation, reduced sales, significant liabilities and diversion of our management's time and attention and could have a material adverse effect on our financial condition, business and operating results. A product liability claim could also tarnish our reputation, whether or not such claims are with or without merit.

If a product liability claim is brought against us, we may be required to pay legal and other expenses to defend the claim and, if the claim is successful, damage awards may be substantial and/or may not be covered, in whole or in part, by our insurance. We may not have sufficient capital resources to pay a judgment, in which case our creditors could levy against our assets. We may also be obligated to

indemnify sanofi and third-party service providers as well as make payments to other parties with respect to product liability damages and claims. Defending any product liability claims, or indemnifying others against those claims, could require us to expend significant financial and managerial resources and would have a material adverse effect on our reputation and our financial condition.

3.6 GEO-POLITICAL RISKS

A variety of risks associated with our international business relationships could materially adversely affect our business.

International business relationships in the United States, Latin America, Africa, the Middle East and elsewhere subject us to additional risks, including:

- differing regulatory requirements for drug approvals in foreign countries;
- potentially reduced protection for intellectual property rights, including unexpected changes in the rules governing patents and their enforcement;
- potential third-party patent rights in foreign countries;
- the potential for so-called parallel importing, which is what happens when a local seller, faced with high or higher local prices, opts to import goods from a foreign market, with low or lower prices, rather than buying them locally;
- unexpected changes in tariffs, trade barriers and regulatory requirements;
- economic weakness, including inflation, or political instability, particularly in foreign economies and markets;
- compliance with tax, employment, immigration and labour laws for employees traveling abroad;
- foreign taxes;
- foreign exchange contracts and foreign currency fluctuations, which could result in increased operating expenses and reduced revenue, and other obligations incident to doing business in another country;
- workforce uncertainty in countries where labour unrest is more common than in the United States and Canada;
- production shortages resulting from any events affecting raw material supply or manufacturing capabilities abroad; and
- business interruptions resulting from geo-political actions, including war and terrorism, or natural disasters, including earthquakes, volcanoes, typhoons, floods, hurricanes and fires.

These and other risks of international business relationships may materially adversely affect our business, financial condition and operating results.

3.7 OTHER RISKS RELATED TO OUR BUSINESS

We have contracted a debt under the EMD Serono Termination Agreement and collateralized most of our assets. We may not be able to sell the collateralized assets if we need capital and our breach of the payment obligations under the EMD Serono Termination Agreement could allow EMD Serono to seize those assets, all of which would have a material

adverse effect on our business.

Under the terms of the EMD Serono Termination Agreement, as amended, we agreed to pay an early termination fee of US \$20,167,808, or Early Termination Fee, over a five-year period. The first payment of US \$4,167,808 is payable as to US \$500,000 on May 1, 2015, US \$1,550,548 on August 31, 2015 and US \$2,117,260 on November 30, 2015. The four other payments of US \$4,000,000 are payable on each of May 1, 2016, 2017, 2018 and 2019. We also agreed to pay EMD Serono a confidential increasing royalty, or Royalties, based on annual net sales beginning in 2016. The Royalties will be paid until a confidential cumulative aggregate amount is reached or until January 1, 2024, the first of these events to occur.

In order to secure the payment of the Early Termination Fee, we granted EMD Serono a security interest on our present and future worldwide corporeal and incorporeal movable property related to tesamorelin until such time as the amount of US \$20,167,808 has been reimbursed in full to EMD Serono. Thereafter, the Corporation and EMD Serono agreed to reduce the security interest to all present and future corporeal and incorporeal movable property related to tesamorelin in the United States only to secure the payment of the Royalties.

The granting of a security interest over our present and future worldwide corporeal and incorporeal movable property related to tesamorelin could prevent us from being able to dispose of these assets in the event we need additional capital to meet our obligations or expand our business. In addition, if we fail to meet our payment obligations to EMD Serono, EMD Serono may seize the assets subject to the security interest and, to the extent we have no other revenue-generating products, we could have to discontinue our operations and could resort to insolvency laws.

We have a history of net losses and we may never achieve consistent profitability.

We have been reporting losses since our inception (except for the financial years ended November 30, 2010, 2001 and 2000) and, as at November 30, 2014, we had an accumulated deficit of \$281.4 million.

Our profitability will depend on our capacity to maintain the commercialization of *EGRIFTA*[™] successfully in the United States through a low-cost and effective distribution network, the recruitment and retention of talented personnel by inVentiv Health, the deployment of an effective marketing campaign and through reimbursement coverage for *EGRIFTA*[™] under U.S. Medicare and Medicaid programs and under private-health insurers programs.

There is no guarantee that we or sanofi will succeed in commercializing *EGRIFTA*[™] and that *EGRIFTA*[™] and our product candidates will ever receive approval for commercialization in any jurisdictions and outside of the United States. In addition, if revenues grow more slowly than we anticipate or if our operating expenses exceed our expectations, our business, financial condition and operating results could be materially adversely affected and we may never sustain profitability.

We may require additional funding and may not be able to raise the capital necessary to fund all or part of our capital requirements, including resuming the research and development programs of our compounds and their commercialization.

We do not presently generate significant recurrent revenues and may need financing in order to fund all or part of our capital requirements to sustain our growth, to resume research and development of new and current compounds, to conduct clinical programs, to develop our marketing and commercial capabilities and to meet our compliance obligations with various rules and regulations to which we are subject. In the past, we have been financed through public equity offerings in Canada and private

placements of our equity securities, as well as through tax credits. Since the launch of *EGRIFTA*[™], we have also been financing our activities through upfront payments, milestone payments and royalties received from EMD Serono. We may need to undertake additional equity offerings to raise capital, the size of which cannot be predicted. However, the market conditions or our business performance may prevent us from having access to the public market in the future at the times or in the amounts necessary. Therefore, there can be no guarantee that we will be able to continue to raise additional equity capital by way of public or private equity offerings in the future. In such a case, we would have to use other means of financing, such as issuing debt instruments or entering into private financing or credit agreements, the terms and conditions of which may not be favorable to us. In addition, the issuance and sale of substantial amounts of equity, or other securities, or the perception that such issuances and sales may occur could adversely affect the market price of our common shares.

We depend on our current personnel to pursue our business plan and the loss of our key employees and the inability to attract and hire highly qualified individuals to replace the loss of our current key employees could have a material adverse effect on our business and growth potential.

Because of the specialized nature of our business, our success depends to a significant extent on the continued service of our key employees and on our ability to be able to attract, retain and motivate qualified manufacturing, managerial and scientific personnel. We have entered into employment agreements with our executive officers and granted options to all of our executive officers and employees as a retention mechanism, but such agreements and options do not guarantee that our executive officers and employees will remain employed by us for any significant period of time, or at all. In addition, we have a limited workforce to pursue our business plan and the loss of any of our key employees could materially adversely affect our business. Our third-party service provider, inVentiv Health, has hired sales representatives and other qualified individuals to assist us with the commercialization of *EGRIFTA*[™] in the United States. Although these individuals are not our employees, the loss of any of those individuals and the inability of inVentiv Health to attract and retain these individuals could have a material adverse effect on the commercialization of *EGRIFTA*[™] and, accordingly, our business, financial condition and operating results. In addition, it could adversely affect the market price of our common shares.

There is intense competition for qualified personnel in the areas of our activities, and we and our third-party service providers may not be able to continue to attract and retain the qualified personnel necessary for the development of our business. Our failure and the failure of our third-party service providers to attract and retain such personnel could impose significant limits on our business operations and hinder our ability to successfully and efficiently realize our business plan.

We may not achieve our publicly announced milestones or our commercial objectives on time.

From time to time, we publicly announce the timing of certain events to occur or the attainment of certain commercial objectives. These statements are forward-looking and are based on the best estimate of management at the time, relating to the occurrence of such events. However, the actual timing of such events or our ability to achieve these objectives may differ from what has been publicly disclosed. Events such as completion of a clinical program, discovery of a new product candidate, filing of an application to obtain regulatory approval, beginning of commercialization of a product, announcement of additional clinical programs for a product candidate or levels of sales of a product may vary from what is publicly disclosed. These variations may occur as a result of a series of events, including the nature of the results obtained during a clinical trial or during a research phase, problems with a supplier or a commercial partner, change in the procurement policy of a commercial partner or

any other event having the effect of delaying the publicly announced timeline or reducing the publicly announced commercial objective. We undertake no obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise, except as otherwise required by law. Any variation in the timing of certain events having the effect of postponing such events or any variation in the occurrence of certain events having the effect of altering publicly announced commercial objectives could have a material adverse effect on our business, financial condition and operating results. In addition, it could adversely affect the market price of our common shares.

In connection with the reporting of our financial results, we are required to make estimates and assumptions, which involve uncertainties and any significant differences between our estimates and actual results could have an adverse impact on our reported financial position, operating results and cash flows.

The preparation of our consolidated financial statements requires that we make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. On an ongoing basis, our management evaluates our critical and other significant estimates and assumptions, including among others, those associated with revenue and deferred revenue, stock option plan, income taxes, onerous lease provision and contingent liabilities such as clinical trial expenses, recoverability of inventories, recoverability of tax credits and grants receivable and capitalization of development expenditures. Any significant differences between our actual results and our estimates and assumptions could negatively impact our reported financial position, operating results and cash flows.

If we identify a material weakness in our internal controls over financial reporting, our ability to meet our reporting obligations and the trading price of our common shares could be negatively affected.

A material weakness is a deficiency, or a combination of deficiencies, in internal control over financial reporting, such that there is a reasonable possibility that a material misstatement of our annual or interim financial statements will not be prevented or detected on a timely basis. Accordingly, a material weakness increases the risk that the financial information we report contains material errors.

We regularly review and update our internal controls, disclosure controls and procedures, and corporate governance policies. In addition, we are required under Canadian securities laws to report annually on our internal control over financial reporting. Any system of internal controls, however well designed and operated, is based in part on certain assumptions and can provide only reasonable, not absolute, assurances that the objectives of the system are met. If we determine that our internal controls over our financial reporting are not effective, or we discover areas that need improvement in the future, these shortcomings could have an adverse effect on our business and financial results, and the price of our common shares could be negatively affected.

If we cannot conclude that we have effective internal controls over our financial reporting, investors could lose confidence in the reliability of our financial statements, which could lead to a decline in our stock price. Failure to comply with reporting requirements could also subject us to sanctions and/or investigations by the Canadian regulatory authorities.

3.8 RISKS RELATED TO OUR COMMON SHARES

Our share price has been volatile, and an investment in our common shares could suffer a decline in value.

Since our initial public offering in Canada, our valuation and share price have had no meaningful relationship to current or historical financial results, asset values, book value or many other criteria based on conventional measures of the value of common shares. In the past, the market price of our common shares has fluctuated and will continue to fluctuate due to various factors including the risk factors described herein and other circumstances beyond our control. An investment in our common shares could decline in value or fluctuate significantly.

Our revenues and expenses may fluctuate significantly and any failure to meet financial expectations may disappoint securities analysts or investors and result in a decline in the price of our common shares.

Our revenues and expenses have fluctuated in the past and are likely to do so in the future. These fluctuations could cause our share price to decline. Some of the factors that could cause revenues and expenses to fluctuate include the following:

- the level of sales of *EGRIFTA*[™] in the United States;
- the approval of *EGRIFTA*[™] in Canada, Mexico and Brazil, or the non-approval thereof in those countries;
- supply issues with *EGRIFTA*[™];
- the inability to complete product development in a timely manner that results in a failure or delay in receiving the required regulatory approvals or allowances to commercialize product candidates;
- the timing of regulatory submissions and approvals;
- the timing and willingness of any current or future collaborators to invest the resources necessary to commercialize our product candidates;
- the outcome of any litigation;
- payment of fines or penalties for violations of laws;
- changes in foreign currency fluctuations;
- the timing of achievement and the receipt of milestone or royalty payments from future third parties;
- failure to enter into new or the expiration or termination of current agreements with third parties; and
- failure to introduce our product candidates to the market in a manner that generates anticipated revenues.

If our quarterly operating results fall below the expectations of investors or securities analysts, the price of our common shares could decline substantially. Furthermore, any quarterly fluctuations in our operating results may, in turn, cause the price of our stock to fluctuate substantially.

We do not intend to pay dividends on our common shares and, consequently, the ability of investors to achieve a return on their investment will depend on appreciation in the price of our common shares.

We have never declared or paid any cash dividend on our common shares and we do not currently intend to do so in the foreseeable future. We currently anticipate that we will retain future earnings for

the development, operation and expansion of our business. Therefore, the success of an investment in our common shares will depend upon any future appreciation in their value. There is no guarantee that our common shares will appreciate in value or even maintain the price at which our shareholders have purchased their shares.

Our shareholder rights plan, the EMD Serono Termination Agreement and certain Canadian laws could delay or deter a change of control.

Our shareholder rights plan entitles a rights holder, other than a person or group holding 20% or more of our common shares, to subscribe for our common shares at a discount of 50% to the market price at that time, subject to certain exceptions.

The EMD Serono Termination Agreement provides also that in the event there occurs a change of control of the Corporation within eighteen (18) months of May 1, 2014,, EMD Serono has the option to accelerate the full payment of the Early Termination Fee and to seek the payment of an amount intended to equal the net present value of the maximum future confidential Royalties. If such change of control occurs more than eighteen (18) months after May 1, 2014, EMD Serono has the option to accelerate the payment of all of the unpaid Early Termination Fee.

The Investment Canada Act (Canada) subjects an acquisition of control of a company by a non-Canadian to government review if the value of the assets as calculated pursuant to the legislation exceeds a threshold amount. A reviewable acquisition may not proceed unless the relevant minister is satisfied that the investment is likely to be a net benefit to Canada.

Any of the foregoing could prevent or delay a change of control and may deprive or limit strategic opportunities for our shareholders to sell their shares.

ITEM 4 DIRECTORS AND EXECUTIVE OFFICERS

4.1 DIRECTORS

The table below sets forth the following information about our directors as of February 25, 2015: his/her name, age, province/state of residence, principal occupation, the year each director first became a director of the Corporation, his/her status as an independent director, his/her biography, his/her areas of expertise, his/her memberships on the committees of the Board of Directors, whether he/she acts as director for other public companies, and the number of common shares, DSUs and options beneficially held or controlled.

Each elected director remains in office until the next annual meeting of shareholders, unless he/she resigns or his/her position becomes vacant following his/her death, destitution or for any other reason before the next annual meeting of shareholders.

 <p>Gilles Cloutier Age: 70 Chapel Hill, North Carolina, United States</p> <p>Independent</p> <p>Director since: March 28, 2003</p> <p>Areas of Expertise: - Pharmaceutical Industry - Regulatory - Research & Development</p> <p>Other Directorship: None</p>	Principal Occupation		Corporate Director
	Dr. Gilles Cloutier has over 30 years of experience in the pharmaceutical industry including five years with contract research organizations, providing strategic support to biotechnology and pharmaceutical companies. Dr. Cloutier has also held key positions with large North-American pharmaceutical companies, where he developed expertise in the field of clinical research. His experience includes the development and approval of several drugs in Canada, the United States and Europe. Dr. Cloutier sits on the board of the Corporation and is also a director on the board of the Fondation Innovation Vie.

- (1) Mr. Talon was a member of the board of directors of Toptent Inc., or Toptent, from August 1, 2007 to November 26, 2009. On December 3, 2009, Toptent filed a notice of intention to make a proposal under the *Bankruptcy and Insolvency Act* (Canada), or Bankruptcy Act. Subsequently, on May 7, 2010, Toptent filed a proposal under the Bankruptcy Act. The proposal was accepted by Toptent's creditors on May 20, 2010.
- (2) Mr. Tanguay was a member of the board of directors of Ambrilia Biopharma Inc., or Ambrilia, from August 22, 2006 to March 30, 2010. On July 31, 2009, Ambrilia obtained court protection from its creditors under the *Companies' Creditors Arrangement Act* (Canada), or CCAA. The purpose of the order issued by the court granting Ambrilia protection from its creditors was to provide Ambrilia and its subsidiaries the opportunity to restructure its affairs. On July 31, 2009, the TSX halted the trading of Ambrilia's shares pending its review of Ambrilia's meeting the requirements for continuous listing. On January 31, 2011, the TSX decided to delist the common shares of Ambrilia at the close of market on March 4, 2011 for failure to meet the continued listing requirements of the TSX. The common shares remain suspended from trading. On April 8, 2011, Ambrilia announced that it would seek permission to terminate the protection granted by the Superior Court pursuant to the CCAA and, upon permission of the Court, it would file for bankruptcy pursuant to the Bankruptcy Act. On April 12, 2011, Ambrilia went bankrupt.

4.2 AUDIT COMMITTEE

Our board of directors has established an Audit Committee to review our annual financial statements prior to their approval by the board of directors and also to perform other duties, as is described in the Audit Committee's charter adopted by the board of directors and attached hereto as Appendix A.

As of November 30, 2014, the Audit Committee was composed of three members: Paul Pommier, its Chair, Jean-Denis Talon and Gérald A. Lacoste. All three are independent and financially literate. The details mentioned hereunder describe the education and experience of the Audit Committee members that is relevant to the performance of their responsibilities, in particular any experience in preparing, auditing, analyzing and evaluating financial statements.

Paul Pommier. Mr. Pommier holds an MBA degree and has more than 25 years of experience in the financial field, notably in public and private company financings, as well as in merger and acquisition

activities. While acting as a director of Royal Aviation Inc., he was also a member of its audit committee.

Jean-Denis Talon. Mr. Talon has more than 20 years of experience in the insurance field as a senior officer. Mr. Talon acted as a member of the audit committee of AXA Canada from March 1995 to April 2008. He has been a member of the audit committee of InnovAssur since March 1999 and acted as Chair of its audit committee from November 1999 until September 2011.

Gérald A. Lacoste. Mr. Lacoste has more than 30 years of experience in the fields of securities regulation, corporate finance and corporate governance. Mr. Lacoste was president of the audit committee of Amisco Ltd. from 2002 to 2009 and was also a member of the audit committee of Andromed Inc. from 2004 to 2007. Mr. Lacoste was a member of the audit committee of Génome Québec from 2006 to 2009.

Each member of the Audit Committee has acquired in-depth financial expertise giving each the ability to read and understand a set of financial statements which presents the breadth and level of complexity of accounting issues that are generally comparable to those that can reasonably be expected to be raised in our financial statements.

4.3 EXECUTIVE OFFICERS

The table below sets forth the following information about our executive officers as of February 25, 2015: his/her name, age, province/state of residence, his/her principal occupation, the year each Executive Officer joined the Corporation, his/her biography and the number of common shares, DSUs and options beneficially held or controlled. The information about Mr. Luc Tanguay, the President and Chief Executive Officer of the Corporation, is found in the table above regarding information about our directors.

 <p>Marie-Noël Colussi Age: 46 Laval, Québec, Canada</p>	Principal Occupation		Vice President, Finance
	<p>Ms. Marie-Noël Colussi is a graduate of the <i>Université du Québec à Montréal</i> in business administration. Prior to joining us, Ms. Colussi worked for eight years with KPMG, a major accounting firm. Ms. Colussi has experience in accounting, auditing, control and taxation, particularly in research and development. She joined us in 1997, and prior to her appointment as Vice President, Finance, in February 2002, she held the positions of Director, Accounting and Internal Control and Controller.</p>

4.4 CEASE TRADE ORDERS, BANKRUPTCIES, PENALTIES OR SANCTIONS

Except as described above in notes 1 and 2 to the table found under “Item 4 – Directors and Executive Officers – Directors”, to our knowledge, no director and executive officer (a) is, as at February 25, 2015, or has been within the ten (10) years before February 25, 2015, a director or executive officer of any company (including the Corporation) that, while that person was acting in that capacity, (i) was the subject of a cease trade or similar order or an order that denied the relevant company access to any exemption under securities legislation, for a period of more than thirty (30) consecutive days; (ii) was subject to an event that resulted, after the director or executive officer ceased to be a director or executive officer, in the company being the subject of a cease trade or similar order or an order that denied the relevant company access to any exemption under securities legislation, for a period of more than thirty (30) consecutive days; or (iii) within a year of that person ceasing to act in that capacity, became bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency or was subject to or instituted any proceedings, arrangement or compromise with creditors or had a receiver, receiver manager or trustee appointed to hold its assets; or (b) has, within the ten (10) years before February 25, 2015, become bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency, or become subject to or instituted any proceedings, arrangement or compromise with creditors, or had a receiver, receiver manager or trustee appointed to hold his assets.

4.5 SECURITIES HELD BY THE DIRECTORS AND EXECUTIVE OFFICERS

As at February 25, 2015, the total number of common shares (the only securities carrying a voting right) held by our directors and executive officers amounted to 720,772, which represented 1.18% of our outstanding common shares.

ITEM 5 INTERESTS OF EXPERTS

KPMG LLP, our auditors, is the only person or company who is named as having prepared or certified a statement, report or evaluation, included or mentioned in a filing under securities regulations during our most recently completed financial year.

KPMG LLP and its partners are independent in accordance with the auditor's rules of professional conduct in the jurisdiction of Québec.

External Auditors Service Fees

KPMG LLP have been acting as our auditors since 1993. In addition to performing the audit of our consolidated financial statements, KPMG LLP provided other services to us and they billed us the following fees in respect of each of our fiscal years ended November 30, 2014 and 2013:

Fees	Fiscal year ended November 30, 2014 (\$)	Fiscal year ended November 30, 2013 (\$)
Audit Fees ⁽¹⁾	104,500	113,500
Audit-Related Fees ⁽²⁾	Nil	14,000
Tax Fees ⁽³⁾	194,433	49,875
Total:	298,933	177,375

(1) Refers to the aggregate fees billed by our external auditors for audit services.

(2) Refers to the aggregate fees billed for professional services rendered by our external auditors for translation.

(3) Refers to the aggregate fees billed for professional services rendered by our external auditors for tax compliance, tax advice and tax planning.

ITEM 6 SECURITIES OF THE COMPANY

6.1 AUTHORIZED SHARE CAPITAL

We are authorized to issue an unlimited number of common shares and an unlimited number of preferred shares issuable in series.

Subject to the priority rights of holders of preferred shares, holders of common shares are entitled to any dividend declared by the board of directors, to one vote per share at meetings of our shareholders and, in the event of our liquidation or dissolution, to participate in the distribution of the assets.

Preferred shares carry no voting rights. Preferred shares may be issued at any time in one or more series. Our articles of incorporation give our board of directors the power to fix the number of preferred shares and the consideration per share, as well as to determine the provisions attached to the preferred shares of each series (including dividends, redemption and conversion rights, if any). The shares of every series of preferred shares will have priority over all our other shares, including common shares, with respect to the payment of dividends and return of capital in the event of our liquidation or dissolution.

The common shares issued represent the total voting rights pertaining to our securities.

6.2 DIVIDEND POLICY

We have never declared or paid cash dividends on our common shares and do not anticipate paying any cash dividends on our common shares in the foreseeable future. We presently intend to retain future earnings, if any, to finance the expansion and growth of our business. Any future determination to pay dividends will be at the discretion of our board of directors and will depend on our financial condition, results of operations, capital requirements and other factors the board of directors deems relevant. In addition, the terms of any future debt or credit facility may preclude us from paying dividends.

6.3 TRANSFER AGENT AND REGISTRAR

Our transfer agent and registrar is Computershare Trust Company of Canada which holds, at its Montreal offices, the registers related to our common shares, shareholders and transfers.

ITEM 7 MARKET FOR SECURITIES

7.1 TRADING PRICE AND VOLUME

The following table sets forth the price range and trading volume of our common shares on the TSX for the periods indicated below. However, you should not view this presentation as an indication that the market price of our common shares will continue at such levels.

Period	Price		Volume
	\$ High	\$ Low	
February 1 to February 25, 2015	\$0.61	\$0.50	1,417,894
January 2015	\$0.56	\$0.36	1,360,600
December 2014	\$0.50	\$0.33	1,173,700
November 2014	\$0.46	\$0.36	1,410,500
October 2014	\$0.53	\$0.36	961,800
September 2014	\$0.60	\$0.50	1,184,000
August 2014	\$0.57	\$0.45	1,664,700
July 2014	\$0.49	\$0.43	1,199,900
June 2014	\$0.49	\$0.40	1,755,100
May 2014	\$0.60	\$0.40	2,318,200
April 2014	\$0.65	\$0.39	2,375,000
March 2014	\$0.50	\$0.41	1,129,800
February 2014	\$0.50	\$0.33	2,452,600
January 2014	\$0.52	\$0.39	1,339,000
December 2013	\$0.56	\$0.25	7,225,000

7.2 PRIOR SALES

The following table summarizes the distribution of securities other than our common shares that we issued during the most recently completed financial year, identifying the type of security, the price per security, the number of securities issued, and the date on which the securities were issued.

Date	Type of Security	Price per Security	Number of Securities
December 13, 2013	Options	\$0.50	125,000

ITEM 8 LEGAL PROCEEDINGS

A motion to authorize the institution of a class action was originally filed in July 2010 in the Superior Court of Québec, District of Montreal, entitled 121851 Canada Inc. v. Theratechnologies Inc. et al., Number 500-06-000-515-102. The complaint alleged that the Company, a director and a former executive officer violated the secondary market liability provisions of the *Securities Act* (Québec) by failing to disclose a material change relating to the administration of *EGRIFTA*[™]. The plaintiff sought damages on behalf of a class of persons who were shareholders at May 21, 2010 and who sold their common shares on May 25 or 26, 2010. On February 24, 2012, the Superior Court of Québec authorized 121851 Canada Inc. to institute a class action against the Company, a director and a former executive officer. On March 20, 2012, we filed a motion seeking permission to appeal this judgment with the Court of Appeal of Québec, District of Montreal, Number 500-09-022519-128, and the hearing took place on January 24, 2013. On July 17, 2013, the Court of Appeal of Québec dismissed our motion to dismiss the authorization to institute such class action and confirmed the decision of the Superior Court of Québec. On November 6, 2013, we filed a motion with the Supreme Court of Canada seeking permission to appeal the decision issued by the Court of Appeal of Québec. Such motion was granted by the Supreme Court of Canada on February 20, 2014 and the hearing occurred on December 1, 2014. No decision has been issued yet.

In addition, on May 22, 2013, 121851 Canada Inc. filed a second motion of authorization to institute a class action against the Company, a director and a former executive officer with the Superior Court of Québec, district of Montréal. This second motion is based on the same facts and seeks the same conclusion as the first motion, except that damages are sought under the *Civil Code of Québec*. The parties have agreed to stay this motion until a final decision is issued under the first motion.

We are not otherwise currently subject to any material legal proceedings.

ITEM 9 MATERIAL CONTRACTS

EMD Serono Termination Agreement, as amended

On December 13, 2014, we entered into an agreement terminating our collaboration and licensing agreement with EMD Serono. On February 17, 2015, we entered into an amendment to the EMD Serono Termination Agreement with EMD Serono to restructure the amount and the payment terms of our first installment of the Early Termination Fee under the original EMD Serono Termination Agreement. For a description of these agreements, see “Item 2 – Our Business – Section 2.6 – Commercialization Activities – United States – General.”

InVentiv Health Agreement

On December 10, 2013, we entered into a master services agreement with inVentiv Health providing for the main terms and conditions under which inVentiv Health would provide us with services to commercialize *EGRIFTA*[™] in the United States. Each of those services has been described in specific project agreements. We have entered into project agreements relating to the provision of a sales force and medical science liaison personnel, the operation of our *EGRIFTA Assist*[™] call center, regulatory and reimbursement support, contract negotiation support and advertising and marketing support. For a description of these agreements, see “Item 2 – Our Business – Section 2.6 – Commercialization Activities – United States – Marketing and Sales.”

RxCrossroads Agreements

On May 12, 2014, we have entered into a master services agreement and statements of work agreements with RxCrossroads appointing it as exclusive our exclusive first-party logistic and first-party distributor of *EGRIFTA*[™] in the United States. For a description of the RxCrossroads Agreements, see “Item 2 – Our Business – Section 2.6 - Commercialization Activities – United States – Distribution - RxCrossroads.”

H.D. Smith Agreement

On September 1, 2014, we entered into a wholesaler services agreement with H.D. Smith appointing H.D. Smith as a non-exclusive authorized wholesaler for *EGRIFTA*[™] in the United States. For a description of the H.D. Smith Agreement, see “Item 2 – Our Business – Section 2.6 - Commercialization Activities – United States – Distribution - H.D. Smith.”

Cardinal Agreement

On August 15, 2014 and on October 23, 2014, we entered into a wholesale drop shipment agreement and a drop ship only services agreement with Cardinal appointing Cardinal as a non-exclusive authorized wholesaler for *EGRIFTA*[™] in the United States. For a description of the Cardinal Agreement, see “Item 2 – Our Business – Section 2.6 - Commercialization Activities – United States – Distribution - Cardinal.”

McKesson Agreement

On May 15, 2014, we entered into a core distribution agreement with McKesson appointing McKesson as a non-exclusive authorized wholesaler for *EGRIFTA*[™] in the United States. For a description of the McKesson Agreement, see “Item 2 – Our Business – Section 2.6 - Commercialization Activities – United States – Distribution - McKesson.”

Actelion Agreement

On April 30, 2014, we entered into an agreement with Actelion to terminate the supply, distribution and licensing agreement entered into with Actelion on February 20, 2012. The Actelion Agreement

allowed us to regain all of our commercialization rights to *EGRIFTA*[™] in Canada. For a description of the Actelion Agreement, see “Item 2 – Our Business – Section 2.3 – Three Year History – 2012.”

ITEM 10 ADDITIONAL INFORMATION

Additional information with respect to our Company, including directors' and officers' compensation, principal holders of our securities and securities authorized for issuance under equity compensation plans, where applicable, is contained in our Management Proxy Circular. Our financial information is provided in our comparative financial statements and Management Discussion & Analysis for our financial year ended November 30, 2014.

Additional information regarding our Company is available on SEDAR at www.sedar.com and on the Securities and Exchange Commission's website at www.sec.gov, or upon request addressed to Jocelyn Lafond, Vice President, Legal Affairs, and Corporate Secretary, at 2015 Peel Street, 5th Floor, Montreal, Québec, Canada H3A 1T8. Except when our securities are in the process of distribution pursuant to a prospectus, we may charge reasonable fees if the request is from a person who does not hold any of our securities.

APPENDIX A – AUDIT COMMITTEE CHARTER

I. Mandate

The Audit Committee (the “Committee”) is responsible for assisting the Company’s Board of Directors (the “Board”) in overseeing the following:

- A. the integrity of the Company’s financial statements and related information;
- B. the internal control systems of the Company;
- C. the appointment and performance of the external auditor; and
- D. the supervision of the Company’s Risk Management.

II. Obligations and Duties

The Committee carries out the duties usually entrusted to an audit committee and any other duty assigned from time to time by the Board. Management has the responsibility to ensure the integrity of the financial information and the effectiveness of the Company’s internal controls. The external auditor has the responsibility to verify the fair presentation of the Company’s financial statements; at the same time evaluating the internal control process to determine the nature, extent and timing of the auditing procedures used for the financial statement audit. The Committee has the responsibility to supervise the participants involved in the preparation process of the financial information and to report on this to the Board.

Specifically, the Committee is charged with the following obligations and duties:

A. Integrity of the Company’s Financial Statements and Related Information

- 1. Review annual and quarterly consolidated financial statements and all financial information legally required to be disclosed by the Company, i.e. financial information contained in the “Management Discussion and Analysis” report, the Annual Information Form and the press releases, as the case may be, discuss such with management and the external auditor, as applicable, and suggest recommendations to the Board, as the case may be.
- 2. Approve the interim Financial Statements, the interim "Management Discussion and Analysis" reports and all supplements to these "Management Discussion and Analysis" reports which have to be filed with regulatory authorities.
- 3. On a periodic basis, review and discuss with management and the external auditor, as applicable, the following:
 - a. major issues regarding accounting principles and financial statement presentations, including any significant changes in the Company’s selection or application of accounting principles, and major issues as to the adequacy of the Company’s internal controls and any special audit steps adopted in light of material control deficiencies;
 - b. the effect of regulatory and accounting initiatives, as well as off-balance sheet structures, on the financial statements of the Company; and

- c. the type and presentation of information to be included in press releases dealing with financial results (paying particular attention to any use of pro-forma information or information adjusted by means of non-generally accepted accounting principles).
 4. Review and discuss reports from the external auditor on:
 - b. all critical accounting policies and practices used by the Company;
 - c. all material alternative treatments of financial information within generally accepted accounting principles that have been discussed with management, including the ramifications of the use of such alternate treatments and disclosures and the treatment preferred by the external auditor;
 - d. the external auditors' report to the Committee on the planning of external auditing; and
 - e. the external auditors' report to the Committee on the auditing results.
- B. Supervision of the Company's Internal Control Systems
 1. Review and discuss with management and, when appropriate, provide recommendations to the Board on the following:
 - a. actual financial data compared with budgeted data;
 - b. the Company's internal control system;
 - c. the relationship of the Committee with the management and audit committees of the Company's consolidated subsidiaries. With respect to the subsidiaries, the Committee must:
 - obtain precisions as to the mandate of the audit committees;
 - enquire about internal controls and study related risks;
 - obtain copy of the minutes of the audit committees' meetings; and
 - ensure that the critical accounting policies and practices are identical to the Company's.
 2. Study the feasibility of implementing an internal auditing system and when implemented, establish its responsibilities and supervise its work.
 3. Establish procedures for the receipt, retention and treatment of complaints received by the Company regarding accounting, internal accounting controls or auditing matters, and procedures for the confidential, anonymous submission by employees of concerns regarding questionable accounting or auditing matters.
- C. Appointment and Performance Supervision of the External Auditor

1. Provide recommendations to the Board on the selection of the external auditor to be appointed by the shareholders.
2. Approve in advance and recommend to the Board the external auditor's remuneration and more specifically fees and terms of all audit, review or certification services to be provided by the external auditor to the Company and any consolidated subsidiary.
3. Supervise the performance of the external auditor in charge of preparing or issuing an audit report or performing other audit services or certification services for the Company or any consolidated subsidiary of the Company, where required, and review all related questions as to the terms of its mission and the revision of its mission.
4. Pre-approve all engagements for permitted non-audit services provided by the external auditor to the Company and any consolidated subsidiary, and to this effect and at its convenience, establish policies and procedures for the engagement of the external auditor to provide to the Company and any consolidated subsidiary permitted non-audit services, which shall include approval in advance by the Committee of all audit/review services and permitted non-audit services to be provided to the Company and any consolidated subsidiary by the external auditor.
5. At least annually, consider, assess and report to the Board on:
 - a. the independence of the external auditor, including whether the external auditor's performance of permitted non-audit services is compatible with the external auditor's independence;
 - b. the obtaining from the external auditor of a written or verbal statement i) describing all relationships between the external auditor and the Company that may reasonably be thought to bear on their independence; ii) assuring that lead audit partner rotation is carried out, as required by law; and iii) describing any other relationship that may reasonably be thought to affect the independence of the external auditor; and
 - c. the evaluation of the lead audit partner, taking into account the opinions of management and the internal auditor.
6. At least annually, obtain and review a report by the external auditor describing:
 - a. the external auditor's internal quality-control procedures; and
 - b. any material issues raised by the most recent internal quality-control review (or peer review) of the external auditor's firm, or by any inquiry or investigation by governmental or professional authorities, within the preceding five years, with respect to one or more independent audits carried out by the external auditor's firm, and any steps taken to deal with any such issues.
7. Resolve any disagreement between management and the external auditor regarding financial reporting.
8. Review the audit process with the external auditor.

9. Review and discuss with the Chief Executive Officer and Chief Financial Officer of the Company the process for the certifications to be provided in the Company's public disclosure documents.
10. Meet periodically with the external auditor in the absence of management.
11. Establish procedures with respect to hiring the external auditor's employees and former employees.

D. Supervision of the Company's Risk Management

Review, report and, where appropriate, provide recommendations to the Board on the following:

1. the Company's processes for identifying, assessing and managing risk;
2. the Company's major financial risk exposures and the steps the Company has taken to monitor and control such exposures;
3. the Company's insurance portfolio and the adequacy of the coverage; and
4. the Company's investment policy.

III. External Advisors

In discharging its duties and responsibilities, the Committee is empowered to retain external legal counsel or other external advisors, as appropriate. The Company shall provide the necessary funds to secure the services of such advisors.

IV. Composition of the Committee

The Committee is composed of any number of Directors, but no less than three, as may be determined by the Board from time to time by resolution. Each member of the Committee shall be independent from the Company and is financially literate, as determined by the Board and in conformity with applicable laws, rules and regulations.

V. Term of the Mandate

Committee members are appointed by Board resolution to carry out their mandate extending from the date of the appointment to the next annual general meeting of the shareholders or until their successors are so appointed.

VI. Vacancy

The Board may fill vacancies at any time by resolution. Subject to the constitution of the quorum, the Committee's members can continue to act even if there is one or many vacancies on the Committee.

VII. Chairman

The Board appoints the Committee Chairman who will call and chair the meetings. The Chairman reports to the Board the deliberations of the Committee and its recommendations.

VIII. Secretary

Unless otherwise determined by resolution of the Board, the Secretary of the Company shall act as Committee Secretary. The Secretary must attend Committee meetings and prepare the minutes. He/she must provide notification of meetings as directed by the Committee Chairman. The Secretary is the guardian of the Committee's records, books and archives.

IX. Meeting Proceedings

The Committee establishes its own procedures as to how meetings are called and conducted. Unless it is otherwise decided, the Committee shall meet privately and independently from Management at each regularly scheduled meeting. In the absence of the regularly appointed Chairman, the meeting shall be chaired by another Committee member selected among attending participants and appointed accordingly. In the absence of the regularly appointed Secretary, Committee members shall designate someone to carry out this duty.

The Committee shall meet at least four times a year with management and the external auditor, and at least once a year, separately in executive session in the absence of management and the external auditor. At least once a year, the Committee invites the Chief Financial Officer of each subsidiary to present the financial information and internal control systems related to such subsidiary.

X. Quorum and Voting

Unless the Board otherwise specifies by resolution, two Committee members shall constitute an appropriate quorum for deliberation of items on the agenda. During meetings, decisions are reached by a majority of votes from Committee members, unless the quorum is of two members, in which case decisions are made by consensus of opinion.

XI. Records

The Committee keeps records that are deemed necessary of its deliberations and reports regularly to the Board on its activities and recommendations.

XII. Effective Date

This charter was adopted by the Directors at its May 3, 2004 Board meeting. It was amended by the Directors during the April 13, 2005, February 8, 2006 and February 25, 2015 Board meetings.
